PREFACE

The Census of Population 2020 was the sixth census carried out in Singapore since Independence and the fifteenth in the series of census taking from 1871. The census is the most comprehensive source of information on population and households and provides benchmark data for demographic and social statistics.

Similar to Census 2000 and 2010, Census 2020 adopted a register-based approach with a large-scale sample survey. Basic population count and characteristics were compiled from administrative records. More detailed information on language, economic characteristics, transport, religion, difficulty in performing basic activities as well as housing and household characteristics were obtained from a sample enumeration of about 150,000 households.

For Census 2020, a tri-modal data collection strategy comprising Internet enumeration, Computer-Assisted Telephone Interviewing (CATI) and face-to-face interviews using mobile devices was adopted to facilitate data collection for the households in the census sample. Leveraging technological advances, machine learning was also applied to improve the data processing processes.

The Census of Population 2020 Statistical Release 2 - Households, Geographic Distribution, Transport and Difficulty in Basic Activities is the second and final statistical publication on detailed census results. This release provides the broad trends and changes in the households and housing, married couples, geographic distribution of residence and transport since 2010. New data on geographic distribution of workplace and difficulty in performing basic activities are also made available for the first time through this release. The report comprises detailed statistical tables to facilitate users carrying out more comprehensive studies and analysis.

I would like to thank all who have, in one way or another, contributed to the success of Census 2020, which was conducted under challenging conditions with the evolving COVID-19 situation in 2020. My deep appreciation is extended to all participating households who had given their full support and co-operation to the Census. The contributions of government ministries and statutory boards, which provided pertinent information for Census 2020, are also gratefully acknowledged.

Wong Wee Kim
Chief Statistician

Our Vision

National Statistical Service of Quality, Integrity and Expertise

Our Mission

We deliver Insightful Statistics and Trusted Statistical Services that
Empower Decision Making

Our Guiding Principles

Professionalism & Expertise	<i>We adhere to professional ethics and develop statistical competency to produce quality statistics that comply with international concepts and best practices.</i>
Relevance & Reliability	<i>We produce statistics that users need and trust.</i>
Accessibility	<i>We facilitate ease of access to our statistics through user-friendly platforms.</i>
Confidentiality	<i>We protect the confidentiality of individual information collected by us.</i>
Timeliness	<i>We disseminate statistics at the earliest possible date while maintaining data quality.</i>
Innovation	<i>We constantly seek ways to improve our processes, leveraging on new technology, to deliver better products and services to users.</i>
Collaboration	<i>We engage users on data needs, data providers and respondents on supply of data, and undertake the role of national statistical coordination.</i>
Effectiveness	<i>We optimise resource utilisation, leveraging on administrative and alternative data sources to ease respondent burden.</i>

EXECUTIVE SUMMARY

In 2020, there were 1.37 million resident households in Singapore, up from 1.15 million in 2010.

Housing Type and Tenancy

The proportion of owner-occupied households remained consistently high. Close to 9 in 10 resident households (or 87.9 per cent) were owner-occupied in 2020, a slight increase from the 87.2 per cent in 2010.

In 2020, about 4 in 5 resident households (or 78.7 per cent) stayed in Housing Development Board (HDB) flats. Nearly 1 in 3 resident households (or 31.6 per cent) lived in HDB 4-room flats, which remained the most common house type over the last decade. Resident households staying in condominiums and other apartments increased from 11.5 per cent in 2010 to 16.0 per cent in 2020 while those staying in landed properties remained relatively unchanged at 5.0 per cent in 2020.

Household Size

Between 2010 and 2020, the average household size of resident households decreased from 3.5 persons to 3.2 persons as households with fewer members became more prevalent. Malay households continued to be larger on average (3.7 persons) compared to Chinese (3.1 persons) and Indian (3.4 persons) households.

Household Living Arrangement

Households comprising at least one family nucleus¹ accounted for 78.0 per cent of resident households in 2020, lower than the 82.9 per cent in 2010. This was mainly due to a decrease in the proportion of couple-based households with children, from 56.0 per cent in 2010 to 47.7 per cent in 2020.

With the ageing population, the proportion of resident households with at least 1 member aged 65 years and over rose from 24.1 per cent in 2010 to 34.5 per cent in 2020. Households with all members aged 65 years and over also grew in share, from 4.6 per cent in 2010 to 9.3 per cent in 2020.

Household Income from Work

Both the average and median monthly household income from work of resident households increased between 2010 and 2020. All the three major ethnic groups experienced growth in household income from work. Median household income from work rose by 3.3 per cent per annum (or 1.9 per cent in real terms)², from \$5,600 in 2010 to \$7,744 in 2020. Taking into account household size, the median monthly household income from work per household member increased, from \$1,638 in 2010

¹For statistical purposes, a family nucleus in a household can be formed by (a) a married couple, or (b) one parent with never-married child(ren). Households with no family nucleus include households formed by a person living alone or living with others but do not constitute any family nucleus.

²The Consumer Price Index (CPI) for All Items is used as the deflator to compute real income changes.

to \$2,463 in 2020, i.e. a growth of 4.2 per cent per annum (or 2.8 per cent in real terms)².

Married Couples

In tandem with the increase in female labour force participation rate, the proportion of married couples with an employed wife increased from 52.9 per cent in 2010 to 60.0 per cent in 2020. Dual-career couples³ constituted 52.5 per cent of married couples in 2020.

Geographic Distribution of Residence

Bedok was the most populated planning area of residence in 2020, with 276,990 residents. This was followed by Jurong West, Tampines and Woodlands, which had more than 250,000 residents each. Outram had the highest proportion of residents aged 65 years and over at 25.5 per cent, while Punggol had the highest proportion of residents aged below 5 years at 9.3 per cent.

Geographic Distribution of Workplace

In 2020, some 284,000 employed residents (or 12.9 per cent of the resident workforce) had usual workplace location in the planning area of Downtown Core. This was followed by Queenstown, Geylang and Bukit Merah, each of which had more than 100,000 employed residents who usually worked in the planning area.

Usual Mode of Transport and Travelling Time to Work

Public bus and Mass Rapid Transit (MRT)/Light Rail Transit (LRT) continued to be the key modes of transport to work among employed residents. In 2020, 57.7 per cent took public bus, MRT/LRT or combinations of MRT/LRT and/or public bus to work, up from 54.6 per cent in 2010. Those who travelled to work only by car accounted for 21.1 per cent of employed residents in 2020, down from 24.8 per cent in 2010.

In 2020, the median travelling time to work was 37 minutes for employed residents who commuted to work by public bus only and 45 minutes for those who travelled by MRT/LRT only. Those who travelled by MRT/LRT with a transfer to/from public bus had a median travelling time of 60 minutes. For those who travelled by car only, the median duration was shorter at 30 minutes.

Difficulty in Performing Basic Activities

In 2020, 97,600 residents aged 5 years and over (or 2.5 per cent) were unable to perform or had a lot of difficulty performing at least one basic activity. Of these, 62,500 were unable to perform or had a lot of difficulty performing activities relating

³Refers to married couples with both husband and wife employed.

to mobility (i.e. walking or climbing steps), followed by 32,100 in self-care activities (i.e. washing all over or dressing).

Of the 69,400 residents aged 65 years and over who were unable to perform or had a lot of difficulty performing at least one basic activity, 93.6 per cent were living with other persons. Of those who were aged 15-64 years, 31.2 per cent were in the labour force.

Introduction

INTRODUCTION

The Census of Population is conducted once in ten years by the Singapore Department of Statistics (DOS). It is the largest national statistical exercise undertaken in Singapore, collecting information on key characteristics of the population and households. The Census 2020 was the sixth census carried out since Singapore's Independence and the fifteenth in the series of census-taking in Singapore.

The Census of Population 2020 Statistical Release 2 - Households, Geographic Distribution, Transport and Difficulty in Basic Activities is the second and final statistical publication on detailed census results. This release provides the broad trends and changes in the households and housing, married couples, geographic distribution of residence and transport of the resident population since 2010. New data on geographic distribution of workplace and difficulty in performing basic activities are also made available for the first time in the Census. The report comprises detailed statistical tables to facilitate users carrying out more comprehensive studies and analysis.

Census of Population – Concept and Coverage

Since 2000, Singapore's Census adopted the de jure concept for population estimates based on a person's place of usual residence. Under the de jure concept of "usual residence", Singapore residents (citizens and permanent residents) with valid local addresses and who were not away from Singapore for a continuous period of 12 months or longer were included in the total population count in Census 2020. Non-residents comprising foreigners who were working, studying or living in Singapore but not granted permanent residence were also included in the total population. The transient population, such as tourists and short-term visitors, was excluded.

Register-based Census of Population

Similar to the last two Censuses, the Census 2020 adopted a register-based approach, supplemented with a large-scale sample survey. Basic population count and characteristics such as age, sex, ethnic group, place of birth, type of dwelling and geographical distribution of place of residence were obtained from administrative records from multiple sources.

Sample Enumeration

A sample enumeration of some 150,000 households was conducted to obtain additional information not available from administrative sources. The sample survey supplemented the register-based data with detailed survey information on selected

topics including language, transport, household characteristics and new data on geographic distribution of workplace and difficulty in performing basic activities.

Tri-Modal Data Collection Strategy

To facilitate data collection for the sample enumeration, the Census 2020 adopted a tri-modal data collection strategy. The tri-modal approach was first successfully implemented in the Census 2000 and improved on in Census 2010. In 2020, it comprised Internet Enumeration, Computer-Assisted Telephone Interviewing (CATI) and face-to-face interviews using mobile devices.

Available 24 hours a day, 7 days a week, Internet enumeration provided respondents with the flexibility to provide their Census returns anytime, anywhere, using any Internet-accessible device (e.g. desktop, laptop, tablet or smartphone), without having to go through a third party (i.e. the interviewer). In the light of the COVID-19 situation, this mode allowed respondents to complete their Census without the need for physical interaction with the field interviewer.

For respondents who were unable to complete their returns via the Internet, CATI was an alternative with no face-to-face contact. Respondents called the Census 2020 Hotline to provide their returns over the phone with the assistance of CATI interviewers. CATI interviewers also contacted households which did not complete their returns by a stipulated date for telephone interviews.

The COVID-19 pandemic and ensuing Circuit Breaker and other safe management measures implemented nationwide meant that adjustments had to be made to ensure the continued participation by households. DOS used data analytics to monitor progress and optimise operational efficiency in the outreach and follow-up. With delays in responses due to the pandemic and measures, DOS sent more reminder letters to encourage respondents to respond through Internet or CATI, while physical visits to households were reduced.

For households which did not respond via the Internet and could not be contacted by CATI after several attempts, field interviewers made visits to conduct face-to-face interviews. Respondents who preferred to be contacted in person could also opt for the face-to-face interviews.

Mobile tablets were used in the Census 2020 field collection. The use of tablets to submit responses via web-based form enhanced the data security for respondents' returns. Data were captured and updated to the system directly and authentication processes and security measures were in place to prevent unauthorised access. Automatic branching of questions, consistency checks and electronically coded data were captured directly in the field and designed to reduce back-end processing efforts.

Data Processing and Reports

Census returns submitted from the various data collection modes were then processed for statistical coding, data validation, editing and verification of records to ensure consistency and data quality. Machine learning was first adopted in the coding process in Census 2020, which helped to reduce the manpower resource and time taken for data processing.

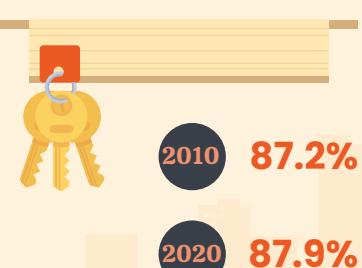

After stringent quality checks and the completion of data processing, statistical reports by specific topics, together with detailed statistical tables were prepared for public release.

Key Findings

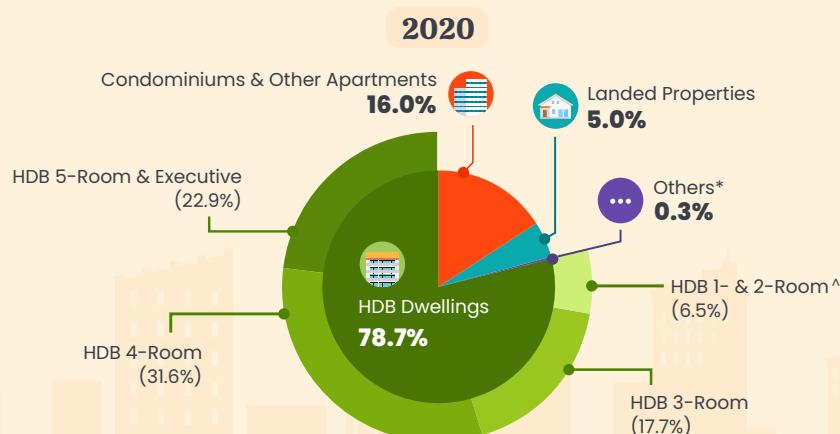

Households & Housing

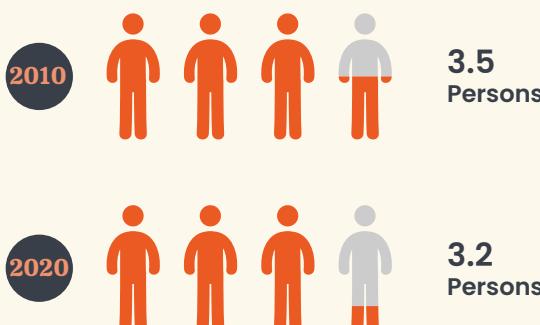

Close to 9 in 10 resident households were owner-occupied, **consistently high** and a **slight increase** from 2010.

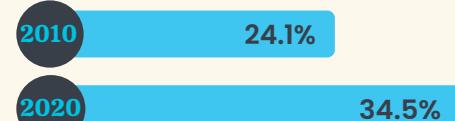

Nearly **1 in 3 households lived in a HDB 4-room flat in 2020**, which remained the most common house type over the past 10 years.

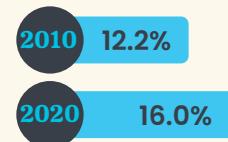

Average household size **decreased** over the past 10 years.

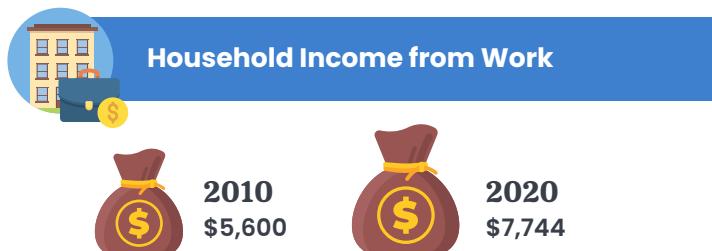

Proportion of resident households with at least 1 member aged 65 years and over **increased**.

Proportion of single person households **increased**.

Median monthly household income from work increased over the past 10 years.

Note: Household income from work includes employer CPF contributions.

CHAPTER 1

HOUSING TYPE AND TENANCY

Housing Type

In 2020, there were 1.37 million resident households, up from 1.15 million in 2010. About 4 in 5 households (or 78.7 per cent) stayed in Housing Development Board (HDB) flats and nearly 1 in 3 households (or 31.6 per cent) lived in HDB 4-room flats, which remained the most common house type over the last decade (Table 1.1).

The proportion of resident households staying in condominiums and other apartments increased from 11.5 per cent in 2010 to 16.0 per cent in 2020, while the proportion staying in landed properties remained relatively unchanged at 5.0 per cent in 2020.

^{1/} Data for 2010 includes non-privatised Housing and Urban Development Company (HUDC) flats.

^{2/} Includes HDB studio apartments.

Owner-Occupied Households

In 2020, close to 9 in 10 resident households (or 87.9 per cent) were owner-occupied households (Table 1.2). This proportion remained consistently high and was a slight increase over the 87.2 per cent in 2010. There were proportionately more owner-occupied households among the Chinese households (89.6 per cent) than Malay households (85.6 per cent) and Indian households (82.2 per cent).

Table 1.2 Resident Households by Tenancy and Ethnic Group of Household Reference Person

^{1/} Refers to a household where the household reference person and/or any other member(s) in the household owns the dwelling unit. This includes those which are fully paid-up as well as those with outstanding housing loans.

^{2/} Refers to a household where the household reference person and/or any other member(s) in the household rents whole or part of the dwelling unit.

^{3/} Refer to a household where the household reference person and/or any other member(s) in the household occupies whole or part of the dwelling unit without charge (provided free by other persons (e.g., employers, relatives, friends, or any other persons)).

CHAPTER 2

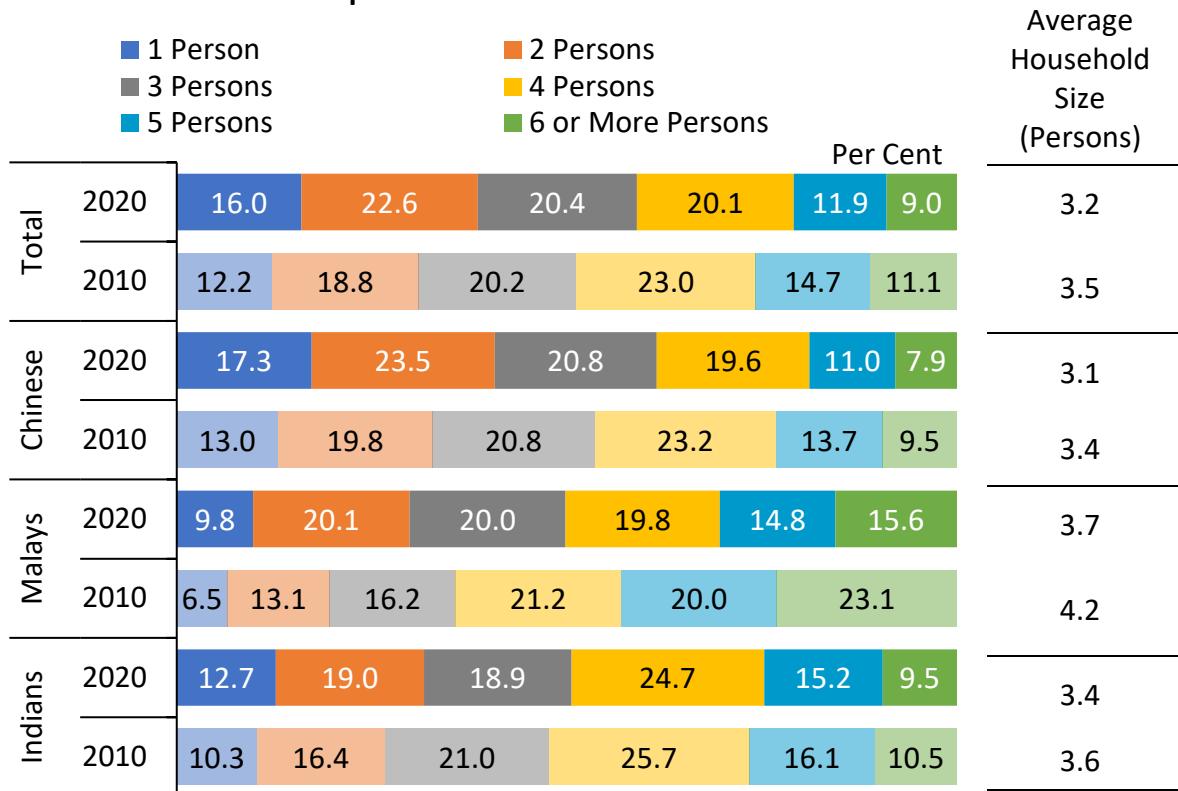

HOUSEHOLD SIZE AND LIVING ARRANGEMENT

Household Size by Ethnic Group

Between 2010 and 2020, the average household size decreased from 3.5 persons to 3.2 persons as households with fewer members became more prevalent. In particular, the proportion of one-person households rose from 12.2 per cent in 2010 to 16.0 per cent in 2020 (Chart 2.1), while two-person households rose from 18.8 per cent to 22.6 per cent over the same period. Close to 60.0 per cent of resident households in 2020 had three or fewer members.

The shift towards smaller households was most prominent for Malay households, with the proportion of households with three or fewer members increasing from 35.7 per cent in 2010 to 49.9 per cent in 2020. The corresponding increase was lower for Chinese households (from 53.7 per cent to 61.6 per cent) and Indian households (from 47.7 per cent to 50.6 per cent). Nevertheless, Malay households continued to have larger households on average (3.7 persons) as compared to Chinese households (3.1 persons) and Indian households (3.4 persons).

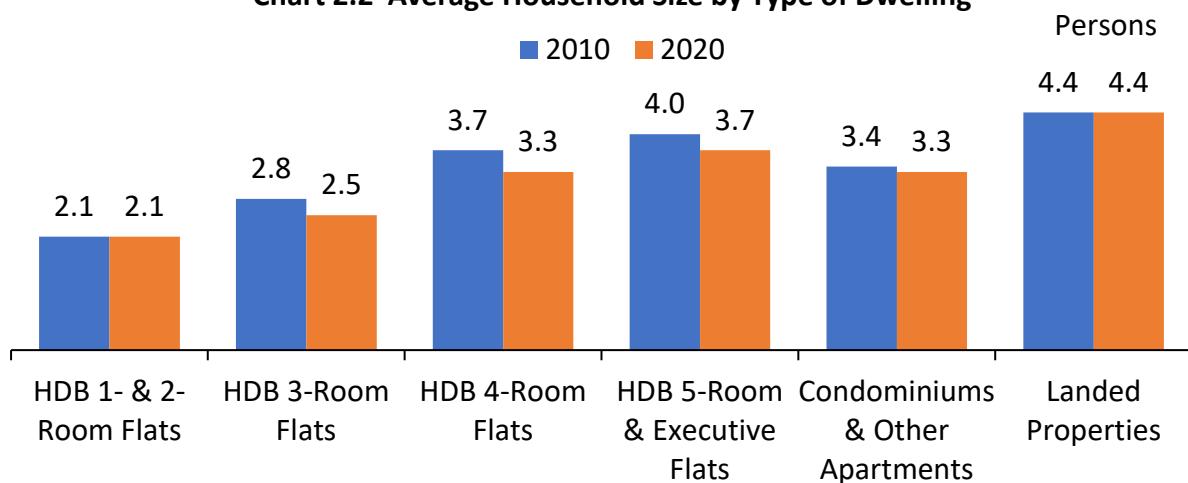

Chart 2.1 Resident Households by Household Size and Ethnic Group of Household Reference Person

Household Size by Type of Dwelling

While average household size remained relatively unchanged for resident households staying in HDB 1- and 2-room flats and landed properties between 2010 and 2020, households staying in other housing types saw a decrease in size (Chart 2.2). The decrease was more significant for households staying in HDB 3-room and larger flats, where household sizes decreased by an average of 0.3 to 0.4 persons over the 10-year period.

Chart 2.2 Average Household Size by Type of Dwelling

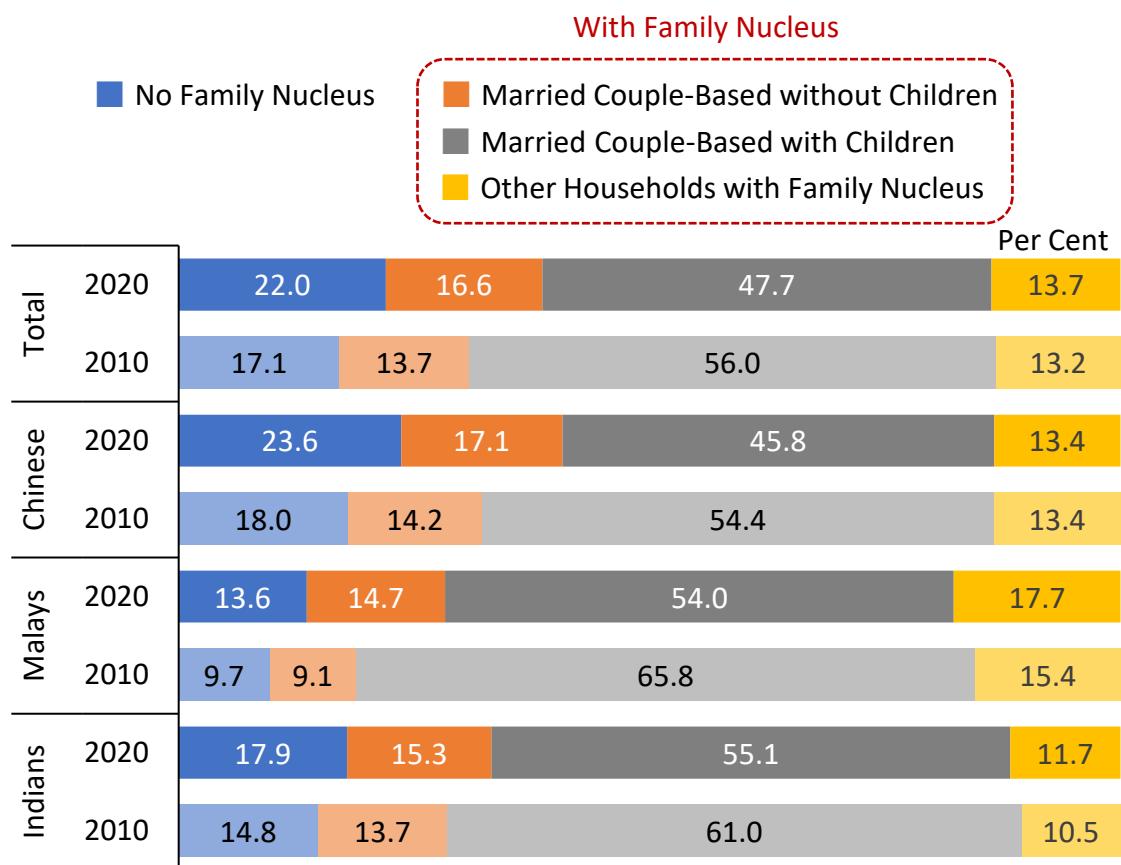

Household Living Arrangement

Households comprising at least one family nucleus¹ accounted for 78.0 per cent of resident households in 2020, a decrease from 82.9 per cent in 2010 (Chart 2.3). This was mainly due to a lower proportion of couple-based households with children, from 56.0 per cent in 2010 to 47.7 per cent in 2020.

Across the three major ethnic groups, Indian and Malay households had a higher proportion of couple-based households with children (55.1 and 54.0 per cent respectively), than Chinese households (45.8 per cent) in 2020.

¹ For statistical purposes, a family nucleus in a household can be formed by (a) a married couple, or (b) one parent with never-married child(ren). Households with no family nucleus include households formed by a person living alone or living with others but do not constitute any family nucleus.

Chart 2.3 Resident Households by Household Living Arrangement and Ethnic Group of Household Reference Person

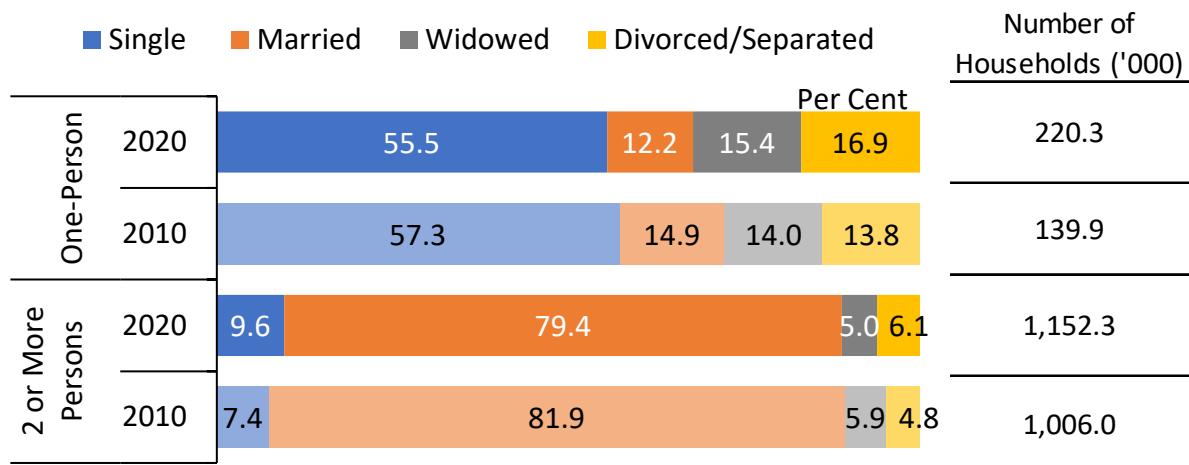

Profile of One-Person Households

Among the 220,300 one-person resident households in 2020, more than half (55.5 per cent) had household reference persons who were single. Almost a third (or 32.3 per cent) consisted of persons who were widowed, divorced or separated, up from 27.8 per cent in 2010 (Chart 2.4).

In comparison, among resident households with two or more persons, a majority (79.4 per cent in 2020) had households with reference persons who were married.

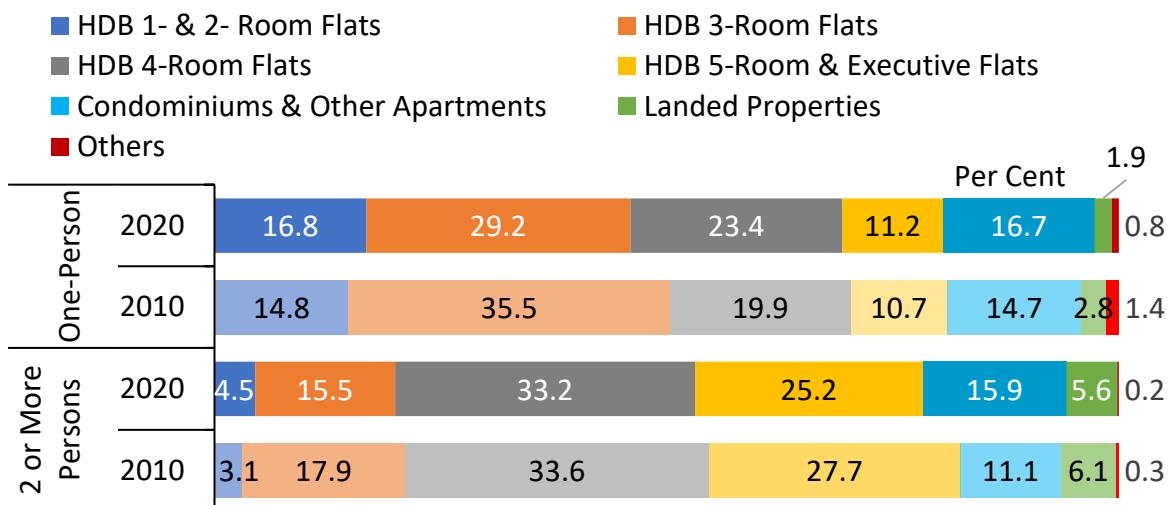

Chart 2.4 Resident Households by Marital Status of Household Reference Person

The proportion of one-person households residing in HDB 4-room or larger flats², or condominiums and other apartments was notably higher in 2020 (51.3 per cent) than in 2010 (45.5 per cent) (Chart 2.5). Nonetheless, a sizable 46.0 per cent resided in HDB 3-room or smaller flats in 2020.

In contrast, only one-fifth of resident households with two or more persons resided in HDB 3-room or smaller flats in 2020.

Chart 2.5 Resident Households by Type of Dwelling

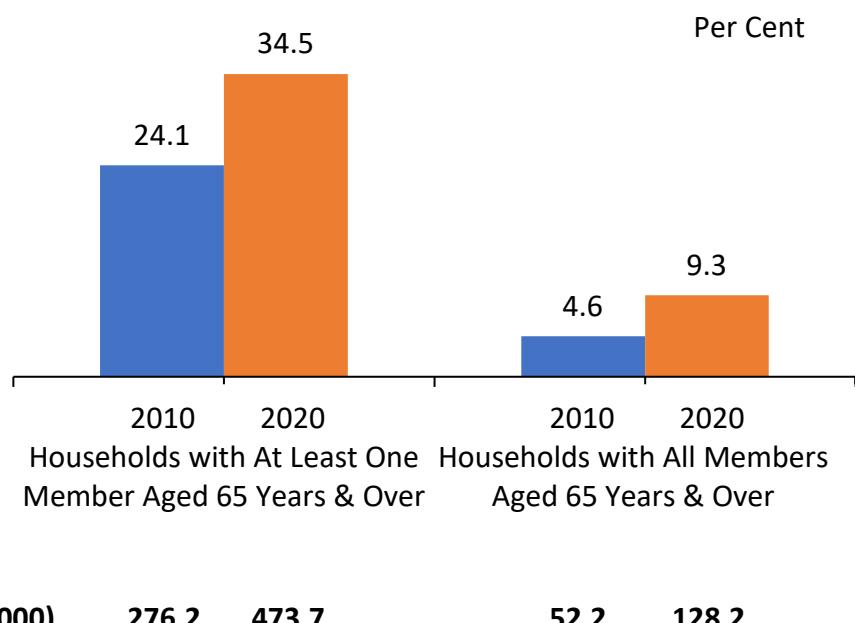

² Data for 2010 includes non-privatised Housing and Urban Development Company (HUDC) flats.

Households with Members Aged 65 Years and Over

With the ageing population, the proportion of resident households with at least 1 member aged 65 years and over rose from 24.1 per cent in 2010 to 34.5 per cent in 2020 (Chart 2.6). Households with all members aged 65 years and over also grew in share, from 4.6 per cent in 2010 to 9.3 per cent in 2020.

Chart 2.6 Proportion and Number of Resident Households with Members Aged 65 Years and Over

CHAPTER 3

HOUSEHOLD INCOME FROM WORK

Household Income Growth

Resident households³ saw growth in both their average and median monthly household incomes from work between 2010 and 2020. The median household income from work among resident households rose by 3.3 per cent per annum, from \$5,600 in 2010 to \$7,744 in 2020 (Table 3.1). After adjusting for inflation, median monthly household income from work rose by 1.9 per cent per annum in real terms.

Taking into account household size, the median monthly household income from work per household member increased, from \$1,638 in 2010 to \$2,463 in 2020. This translated to growth of 4.2 per cent per annum (or 2.8 per cent per annum in real terms).

Table 3.1 Monthly Household Income from Work among Resident Households

	2010 (\$)	2020 (\$)	Annualised Change (Per Cent)	
			Nominal	Real ^{1/}
<u>Total Household Income from Work</u>				
Average	7,812	10,608	3.1	1.7
Median	5,600	7,744	3.3	1.9
<u>Household Income from Work Per Household Member</u>				
Average	2,425	3,488	3.7	2.3
Median	1,638	2,463	4.2	2.8

Note: Household income from work includes employer CPF contributions. The dollar values in the table above are in nominal terms.

^{1/} The Consumer Price Index (CPI) for All Items is used as the deflator to compute real change.

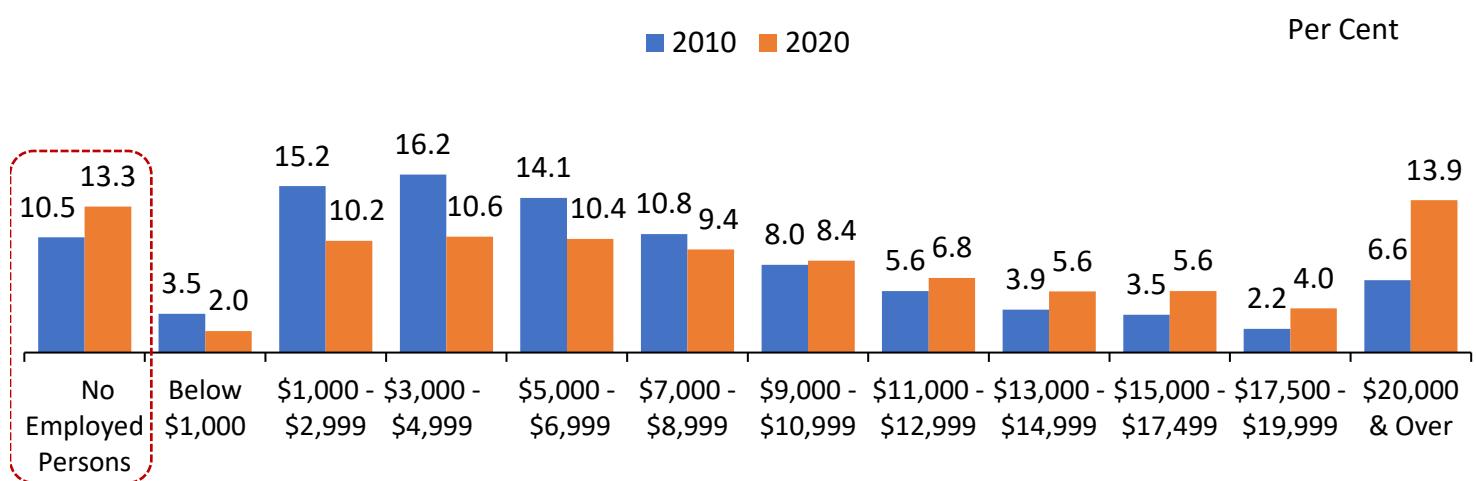

³ This includes households with no employed persons, which could have income from non-work sources.

Households by Household Income Groups

Reflecting the higher average and median household income from work, the proportion of resident households in the higher household income brackets rose between 2010 and 2020.

The proportion of resident households earning at least \$9,000 & over increased from 29.7 per cent in 2010 to 44.2 per cent in 2020. Notably, the proportion of resident households earning \$20,000 & over more than doubled from 6.6 per cent in 2010 to 13.9 percent in 2020 (Chart 3.1). On the other hand, in tandem with the increase in households comprising solely persons aged 65 and over⁴, the proportion of households with no employed persons rose to 13.3 per cent in 2020, up from 10.5 per cent in 2010.

Chart 3.1 Resident Households by Monthly Household Income from Work

Note: Household income from work includes employer CPF contributions. The household income bands are based on nominal terms.

Household Income by Ethnic Group

All the three major ethnic groups experienced growth in household income from work. From 2010 to 2020, median household income from work grew by 3.4 per cent per annum (or 2.1 per cent in real terms) for the Chinese households, 2.8 per cent per annum (or 1.4 per cent in real terms) for the Malay households and 3.5 per cent per annum (or 2.2 per cent in real terms) for the Indian households (Table 3.2).

⁴ Detailed trends on households with members aged 65 years and over can be found in Census 2020 Statistical Release 2: Chapter 2 on Household Size and Living Arrangement.

After accounting for household size⁵, growth in median household income from work per household member was the highest among Malay households, which registered a growth of 4.3 per cent per annum (or 3.0 per cent in real terms) between 2010 and 2020. This was followed by the Chinese households at 4.2 per cent per annum (or 2.9 per cent in real terms) and Indian households at 3.9 per cent per annum (or 2.5 per cent in real terms).

Malays	1,043	1,594	4.3	3.0
Indians	1,721	2,521	3.9	2.5

Note: Household income from work includes employer CPF contributions. The dollar values in the table above are in nominal terms.

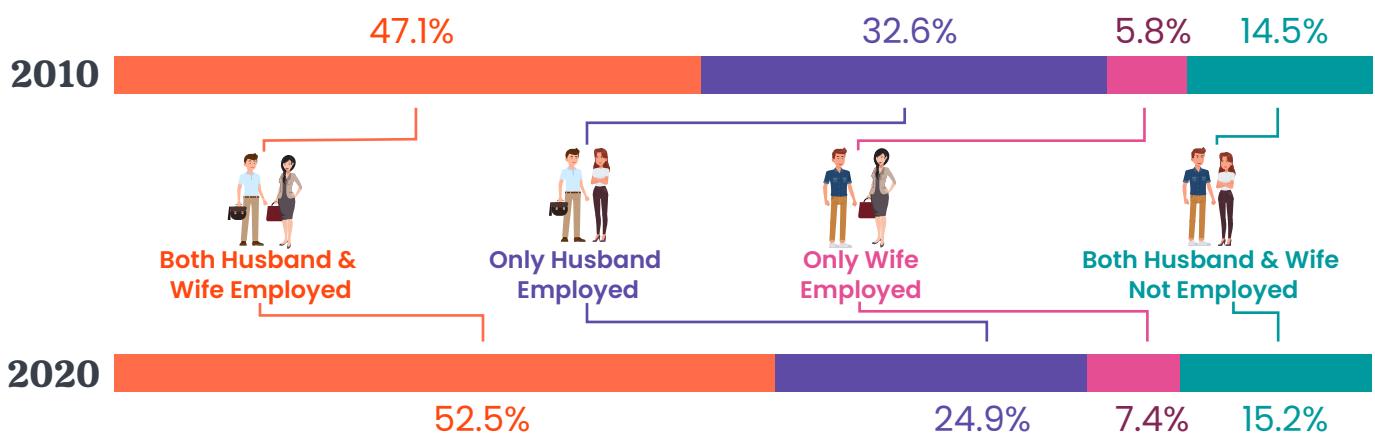

^{1/}The Consumer Price Index (CPI) for All Items is used as the deflator to compute real change.

⁵ Detailed trends on household size by ethnic group breakdown can be found in Census 2020 Statistical Release 2: Chapter 2 on Household Size and Living Arrangement.

Married Couples

In 2020, majority of married couples were dual-career couples.
The proportion increased over the past 10 years.

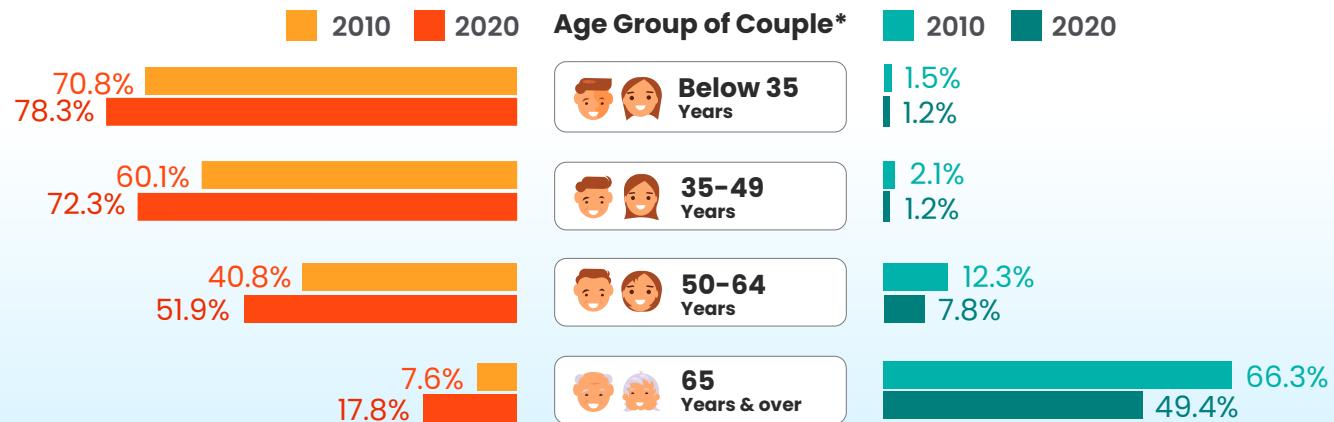

ACROSS ALL AGE GROUPS,

Proportion of dual-career couples
increased.

Proportion of non-employed couples
decreased.

*For married couples where the husband and wife are not in the same age group, it refers to the age group of the older party.

CHAPTER 4

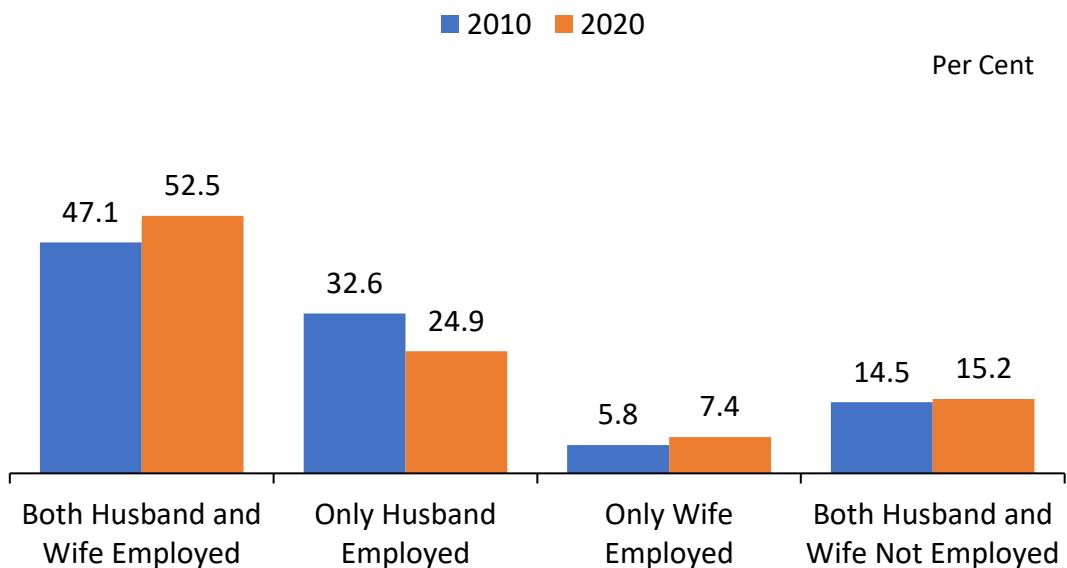

MARRIED COUPLES IN RESIDENT HOUSEHOLDS

Labour Force Status of Married Couples

The number of married couples increased from 880,800 in 2010 to 977,300 in 2020. In tandem with the increase in female labour force participation rate, the proportion of married couples with an employed wife⁶ increased from 52.9 per cent in 2010 to 60.0 per cent in 2020 (Chart 4.1). Correspondingly, the proportion with only the husband employed decreased from 32.6 per cent to 24.9 per cent over the same period.

Dual-career couples (with both husband and wife employed) constituted the largest group among married couples, with the proportion increasing from 47.1 per cent in 2010 to 52.5 per cent in 2020.

**Chart 4.1 Married Couples in Resident Households
by Labour Force Status of Couple**

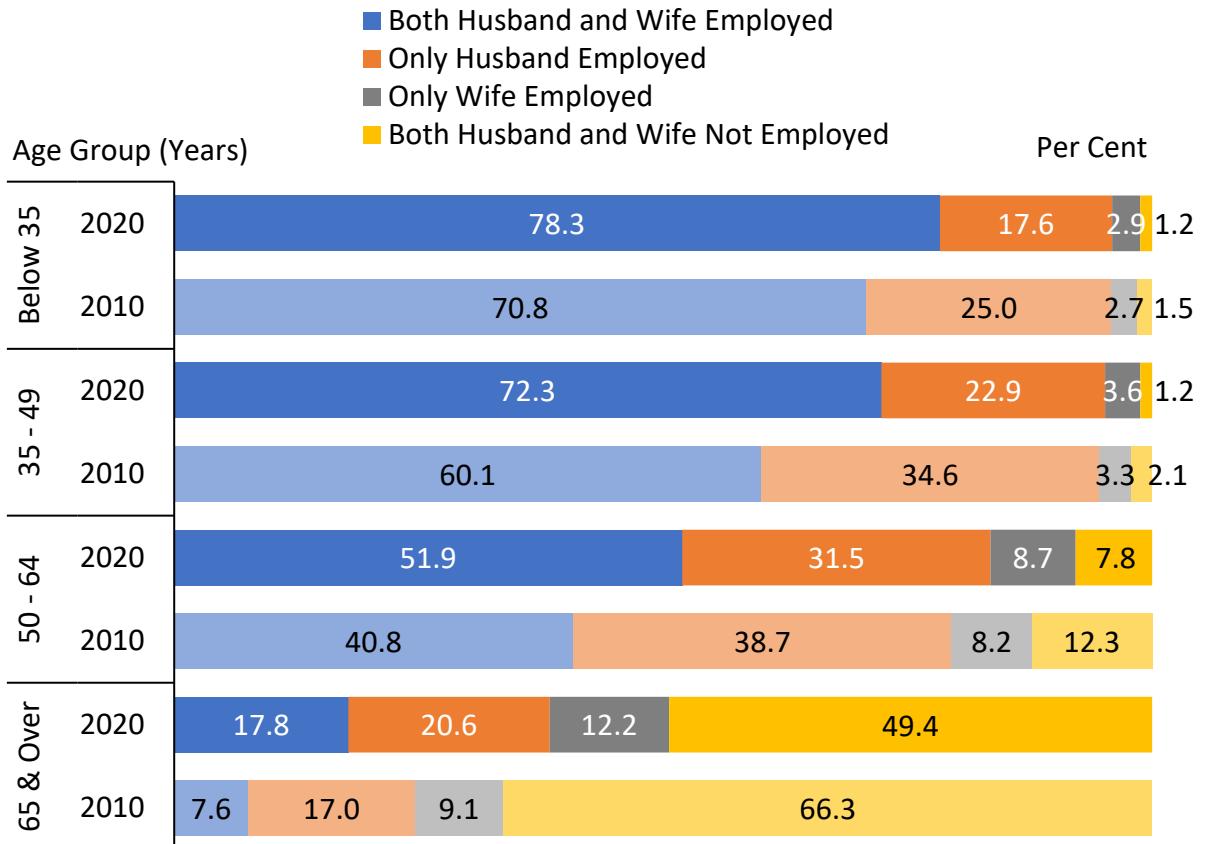

The increase in proportion of dual-career couples between 2010 and 2020 was observed in married couples across all age groups, with the highest increase (12.2 percentage points) among couples aged 35 – 49 years old (Chart 4.2).

⁶ Refers to married couples where (a) both husband and wife were employed and (b) only wife was employed.

Among married couples aged 65 years & over, the proportion where either or both husband and wife were employed increased, while couples with both husband and wife not employed dropped significantly from 66.3 per cent in 2010 to 49.4 per cent in 2020, reflecting the rising employment rate of seniors.

Chart 4.2 Married Couples in Resident Households by Labour Force Status and Age Group of Couple

Note: For married couples where the husband and wife are not in the same age group, it refers to the age group of the older party.

Income from Work of Married Couples

Excluding married couples who were not employed, the proportion whose combined monthly income from work was \$9,000 & over rose significantly from 29.9 per cent in 2010 to 48.0 per cent in 2020 (Chart 4.3).

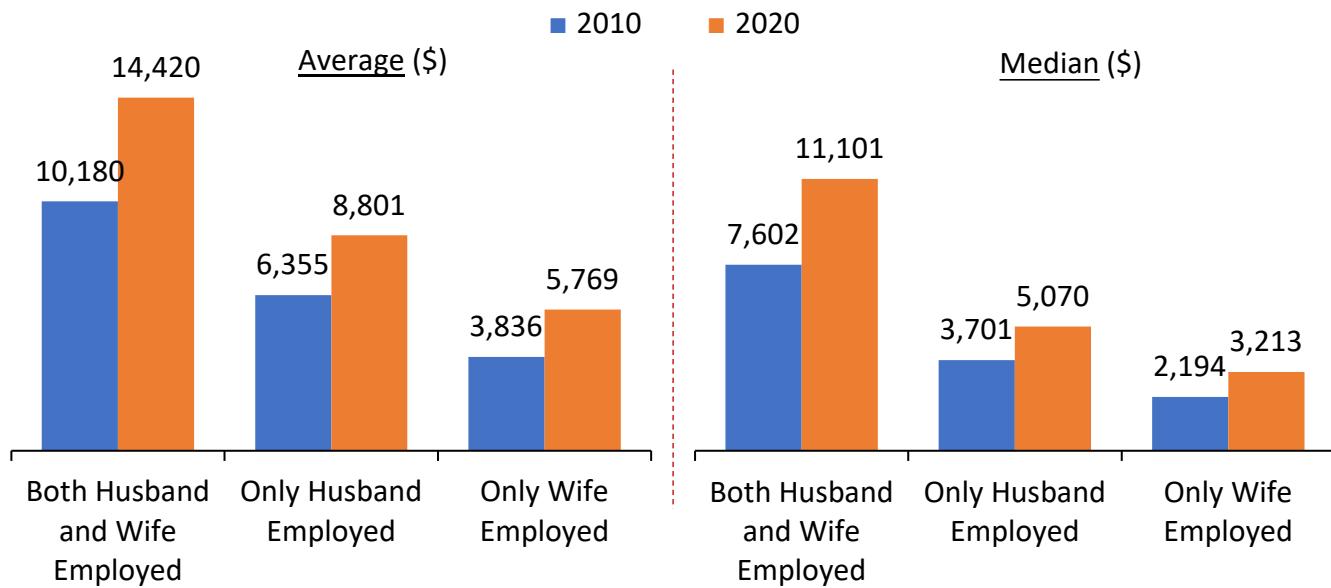

Chart 4.3 Married Couples in Resident Households by Monthly Income from Work of Couple

Note: Income from work includes employer CPF contributions. Data excludes married couples where both husband and wife were not employed.

Across all labour force status of married couples, the average and median monthly income from work of couples rose between 2010 and 2020 (Chart 4.4). Married couples with both husband and wife employed earned a median monthly income of \$11,101 in 2020, higher than those with only husband employed (\$5,070) and those with only wife employed (\$3,213).

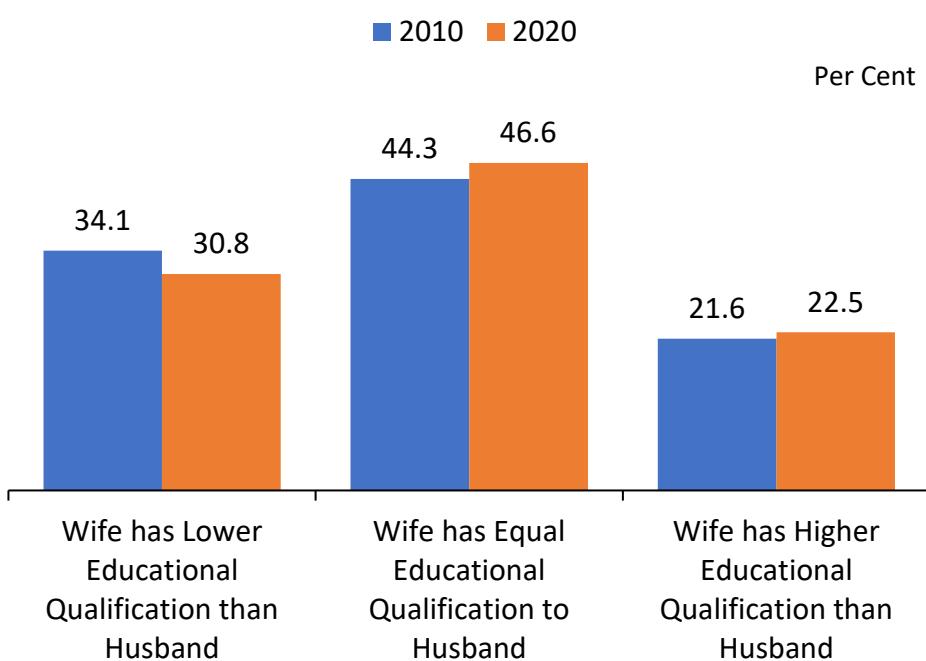

Chart 4.4 Average and Median Monthly Income from Work of Married Couples in Resident Households by Labour Force Status of Couple

Educational Attainment of Married Couples

Reflecting the continued equalisation of educational opportunities for females⁷, the proportion of married couples with both the husband and wife having equal qualifications rose from 44.3 per cent in 2010 to 46.6 per cent in 2020 (Chart 4.5). The corresponding share of married couples where the wife had lower qualifications than the husband decreased to 30.8 per cent in 2020 while that for couples where the wife had higher qualifications than the husband remained relatively unchanged.

Chart 4.5 Married Couples in Resident Households by Highest Qualification Attained of Husband and Wife

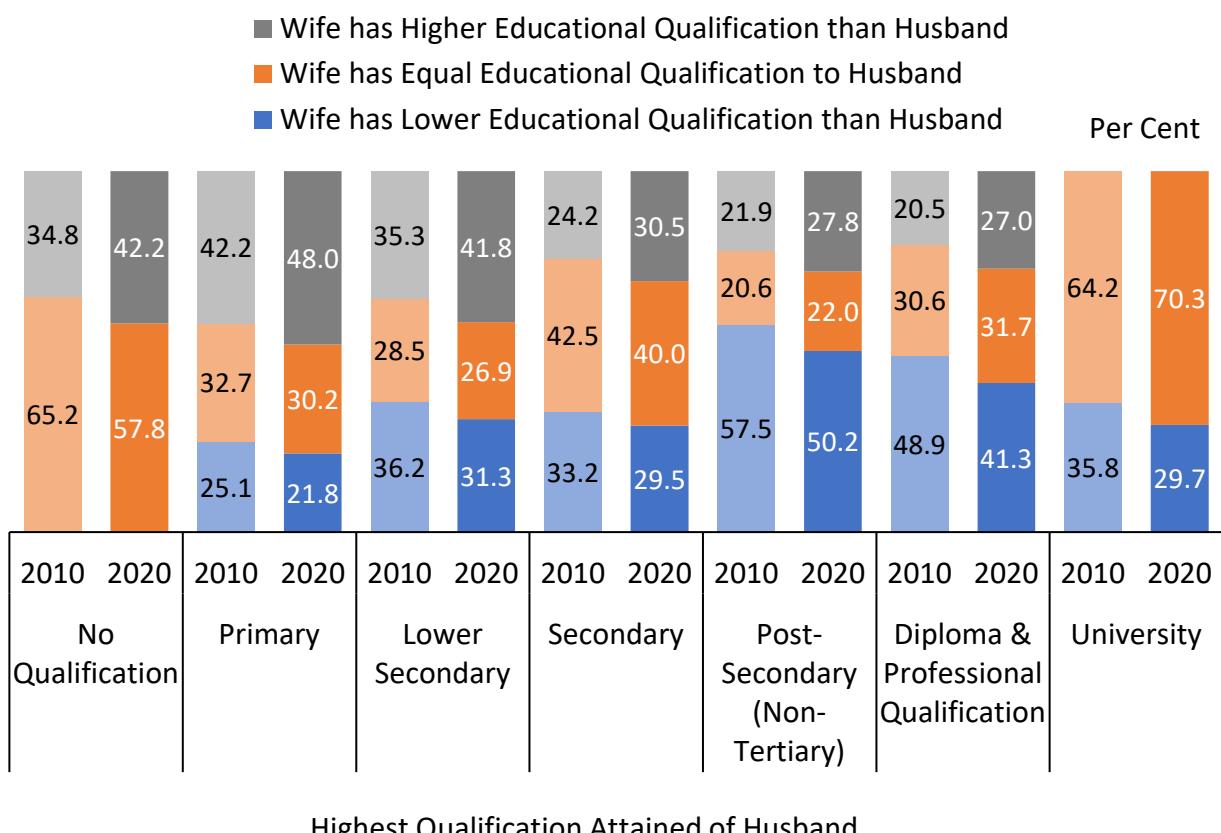

Note: Data excludes married couples where either the husband or wife or both were attending educational institutions as full-time students. The data includes those who were upgrading their qualifications through part-time courses.

⁷ Detailed trends on educational profile of residents can be found in Census 2020 Statistical Release 1: Demographic Characteristics, Education, Language and Religion.

Across all educational qualification groups of the husband, the proportion of married couples where the wife had lower qualifications than the husband decreased between 2010 and 2020 (Chart 4.6).

Among married males with university qualifications in 2020, the majority (or 70.3 per cent) had a spouse who was also a university graduate. In comparison, 41.3 per cent of married males with diploma and professional qualifications had a spouse with lower educational qualifications.

Chart 4.6 Married Couples in Resident Households by Highest Qualification Attained of Husband and Wife

Note: Data excludes married couples where either the husband or wife or both were attending educational institutions as full-time students. The data includes those who were upgrading their qualifications through part-time courses.

Geographical Distribution & Transport

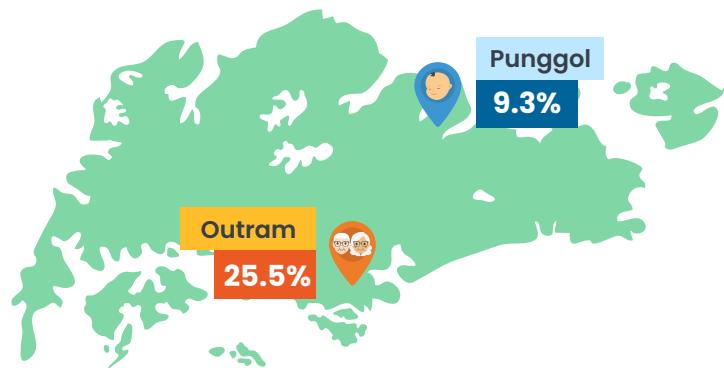

With a total population of **5.69 million** in 2020, there was an average of **7,810 persons per square kilometer** in Singapore.

Outram had the highest proportion of residents aged 65 years and over.

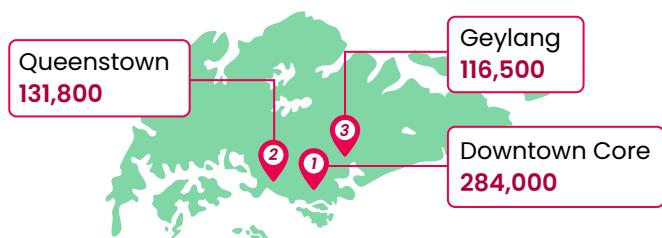

Punggol had the highest proportion of residents aged below 5 years.

Top 3 Areas Where Residents Work

Among all employed residents aged 15 years and over with a fixed location for work, Downtown Core, Queenstown and Geylang were the top 3 areas where employed residents travelled to for work.

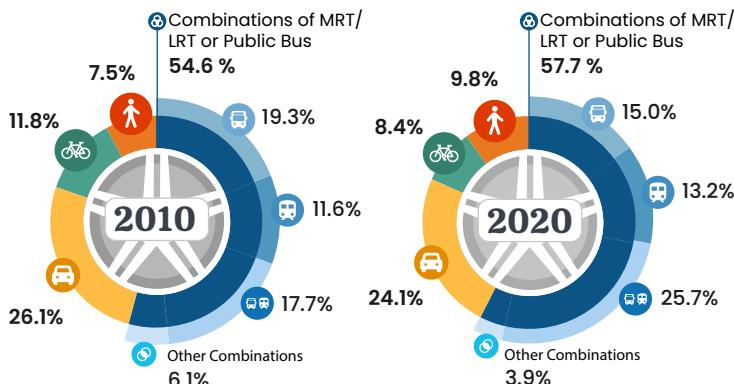

Main Mode of Transport for Students

	2010	2020
Primary and Below: No Transport Required	46.2%	43.0%
Secondary: Public Bus Only	42.1%	36.9%
Post-Secondary(Non-Tertiary): MRT/LRT & Public Bus Only	29.4%	44.2%
Polytechnic Diploma: MRT/LRT & Public Bus Only	34.6%	49.7%
Professional Qualification and Other Diploma: MRT/LRT & Public Bus Only	38.3%	48.9%
University: MRT/LRT & Public Bus Only	43.7%	51.1%

Mode of Transport & Median Travelling Time for Employed Residents

The use of combinations of MRT/LRT or public bus to work increased to **57.7%** in 2020.

Median Travelling Time

	2010	2020
Combinations of MRT/LRT or Public Bus	45 min	45 min
Public Bus Only	30 min	37 min
MRT/LRT Only	40 min	45 min
MRT/LRT & Public Bus Only	50 min	60 min
Other Combinations	45 min	60 min
Car/Taxi/Private Hire Car Only	30 min	30 min
Other Modes	30 min	30 min
No Transport Required	10 min	8 min

CHAPTER 5

GEOGRAPHIC DISTRIBUTION OF RESIDENCE

Population Size and Density

Singapore's total population in 2020 was 5.69 million, or an average of 7,810 persons per square kilometer (sq km) (Table 5.1). This was higher than the population density⁸ of 7,146 persons per sq km in 2010.

Table 5.1 Population Size and Density

Year	Total Population ^{1/} ('000)	Resident Population ('000)	Land Area (sq km)	Population Density (per sq km)
2000	4,027.9	3,273.4	682.7	5,900
2010	5,076.7	3,771.7	710.4	7,146
2015	5,535.0	3,902.7	719.1	7,697
2016	5,607.3	3,933.6	719.2	7,797
2017	5,612.3	3,965.8	719.9	7,796
2018	5,638.7	3,994.3	722.5	7,804
2019	5,703.6	4,026.2	725.1	7,866
2020	5,685.8	4,044.2	728.0	7,810

^{1/} Total population comprises Singapore residents and non-residents. Resident population comprises Singapore citizens and permanent residents.

Resident Population Size by Planning Area of Residence

In 2020, slightly over half of the 4.04 million residents in Singapore stayed in the top 9 planning areas of residence. There were four planning areas with more than 250,000 residents each, namely Bedok, Jurong West, Tampines and Woodlands (Map 5.1). Bedok was the most populated with 276,990 residents.

⁸ Population density is calculated using the total population size divided by the total land area. This is different from, and not comparable to, living density which only takes into account land available for urban areas, and excludes land use for ports, airports, defence and utilities, among others.

Age Profile

In 2020, Outram, Sungei Kadut, Rochor, Bukit Merah, Ang Mo Kio, Queenstown, Kallang, Toa Payoh and Clementi had higher proportions of residents aged 65 years and over (Map 5.2) than other planning areas of residence. For each of these areas, at least one in five residents were aged 65 years and over.

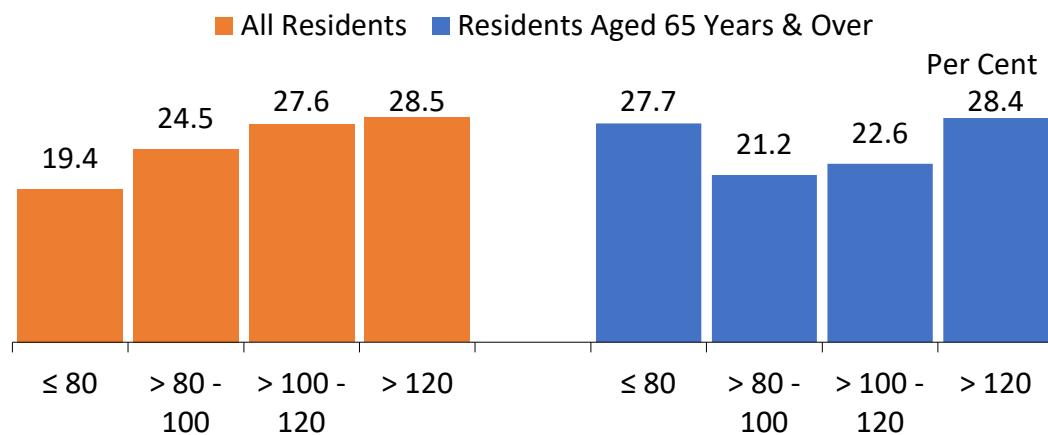

In comparison, newer planning areas had a higher proportion of children aged below 5 years than older planning areas. In 2020, Punggol had the highest proportion of children aged below 5 years at 9.3 per cent of the resident population in the planning area (Map 5.3). Five other planning areas each had at least 6.0 per cent of residents aged below 5 years.

Floor Area of Residence

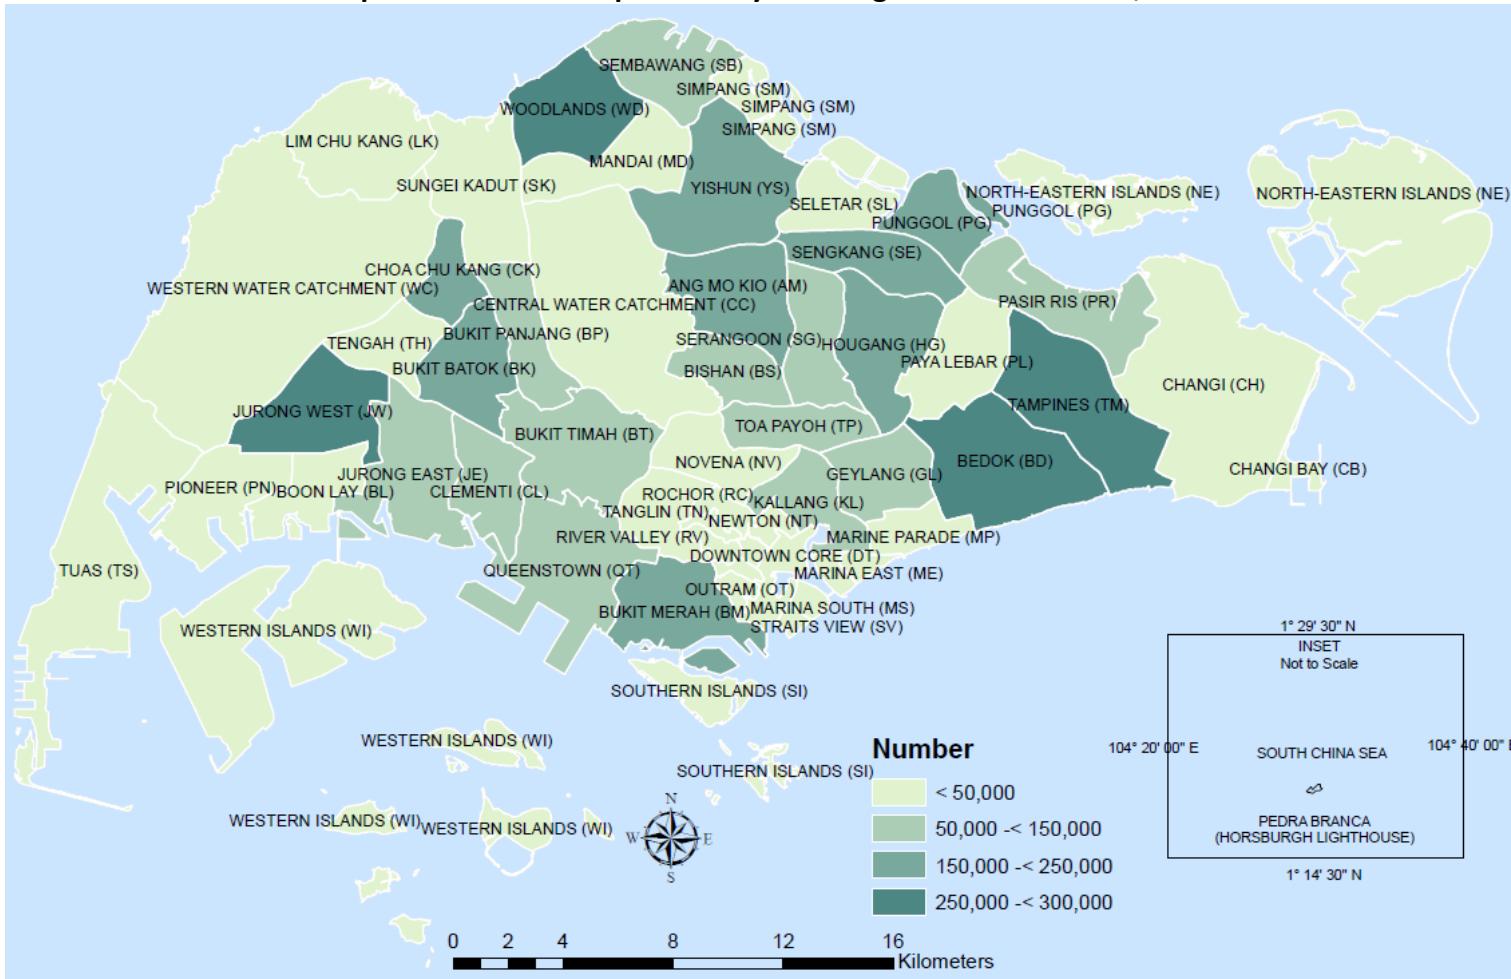

In 2020, more than half of the resident population lived in residential dwelling units with floor areas greater than 100 square metres (sq m) (Chart 5.1). Proportionately more seniors aged 65 years and over (27.7 per cent) lived in smaller residential dwelling units with floor areas of 80 sq m or less, compared to the overall resident population (19.4 per cent). This corresponded with the smaller average household size of 2.6 persons for resident households with reference persons aged 65 years and over compared to 3.2 persons for all resident households.

By planning area, Outram, Changi, Queenstown, Kallang and Rochor had at least 50 per cent of residents aged 65 years and above staying in residential dwelling units with floor areas of 80 sq m or less (Map 5.4).

Chart 5.1 Proportion of Resident Population by Floor Area of Residence (sq m), 2020

CHAPTER 6

GEOGRAPHIC DISTRIBUTION OF WORKPLACE⁹

Employed Residents

In 2020, some 284,000 employed residents aged 15 years and over, or 12.9% of the resident workforce, worked in the planning area of Downtown Core. This was followed by Queenstown, Geylang and Bukit Merah, each with more than 100,000 employed residents working in the planning area (Chart 6.1 and Map 6.1).

**Chart 6.1 Top 10 Planning Areas of Workplace
by Number of Employed Residents Aged 15 Years and Over, 2020**

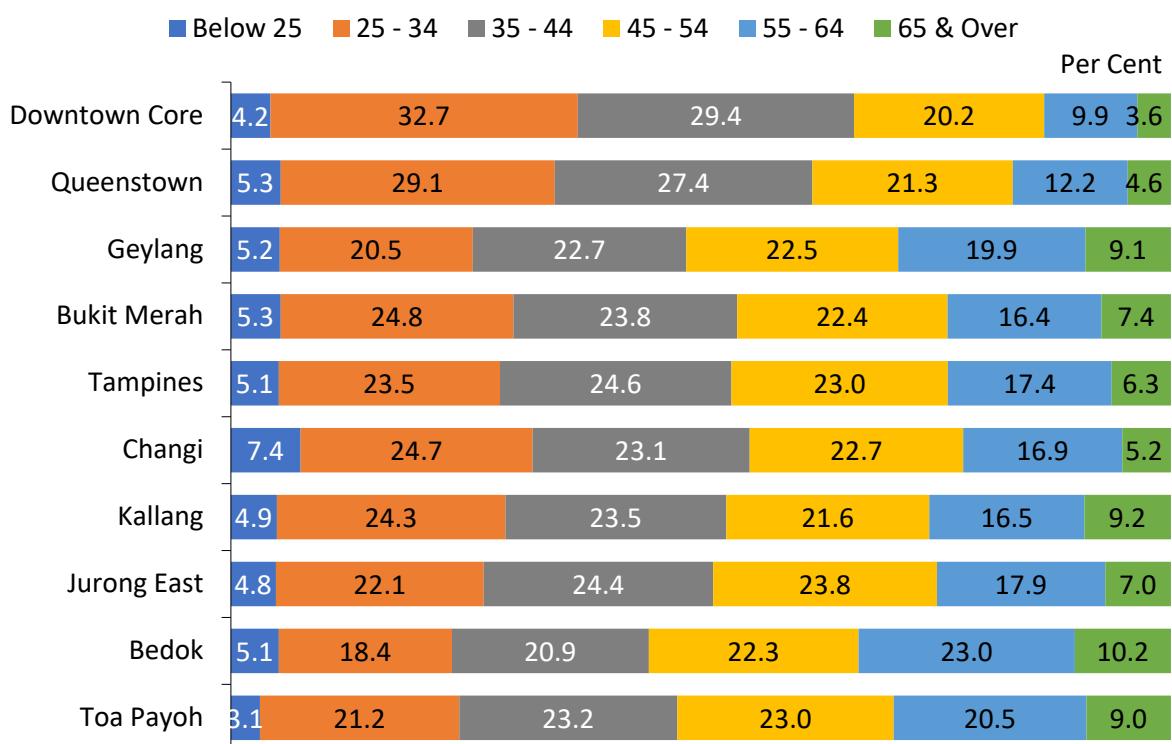

Age Profile of Employed Residents

Among the top 10 planning areas of workplace with the largest number of employed residents, Downtown Core had proportionately more employed residents in the younger age groups in 2020. Almost two-thirds of those who worked in Downtown Core were aged below 45 years while less than 4 per cent were aged 65 years and over (Chart 6.2).

⁹ Data refers to the usual workplace location and not the temporary arrangements due to COVID-19 measures. Persons who usually worked from home or were usually with no fixed location for work were excluded from the counts of employed residents by planning area of workplace.

Chart 6.2 Top 10 Planning Areas of Workplace by Age Group, 2020

In comparison, nine other planning areas had at least 10.0 per cent of employed residents who were aged 65 years and over in 2020, namely Bukit Panjang, Rochor, Marine Parade, Bishan, Hougang, Bukit Timah, Outram, Bedok and Choa Chu Kang (Map 6.2).

Education Profile of Employed Residents

Among employed residents working in Downtown Core in 2020, 86.2 per cent had at least post-secondary qualifications. This was the highest across all planning areas of workplace. Other planning areas with at least 80 per cent of employed residents with post-secondary or higher qualifications were Queenstown, Western Water Catchment, Newton, Seletar, Western Islands and Museum (Map 6.3).

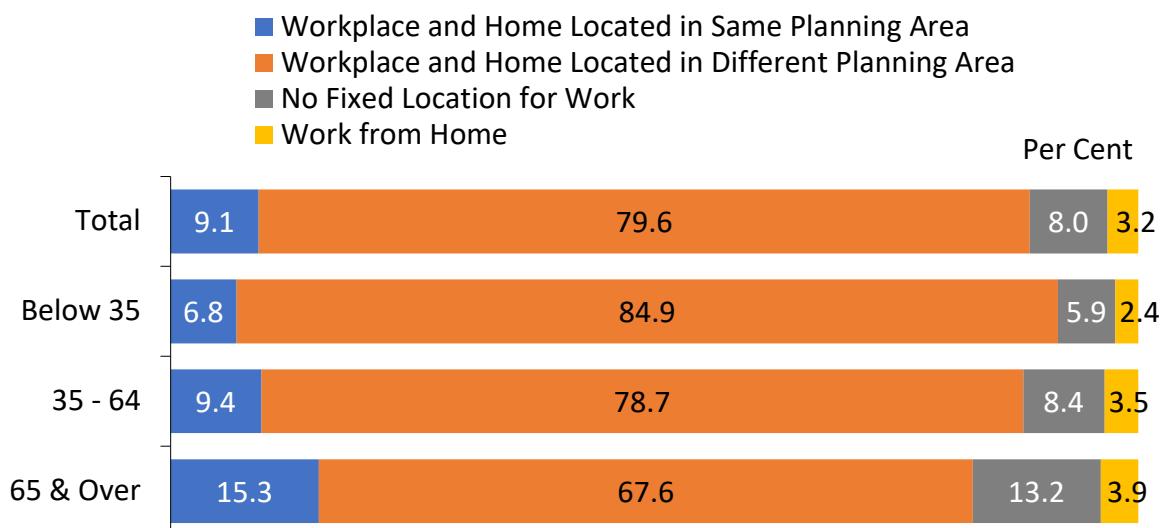

Workplace where Employed Residents from Planning Region of Residence travelled to

Downtown Core was the top workplace destination in 2020 for residents living in all five planning regions of residence (Central, East, North, North-East, West), accounting for 9.8 per cent to 21.3 per cent of the resident workforce from each region (Map 6.4). The number of employed residents travelling to Downtown Core for work was the highest for those staying in the Central region at 91,500,

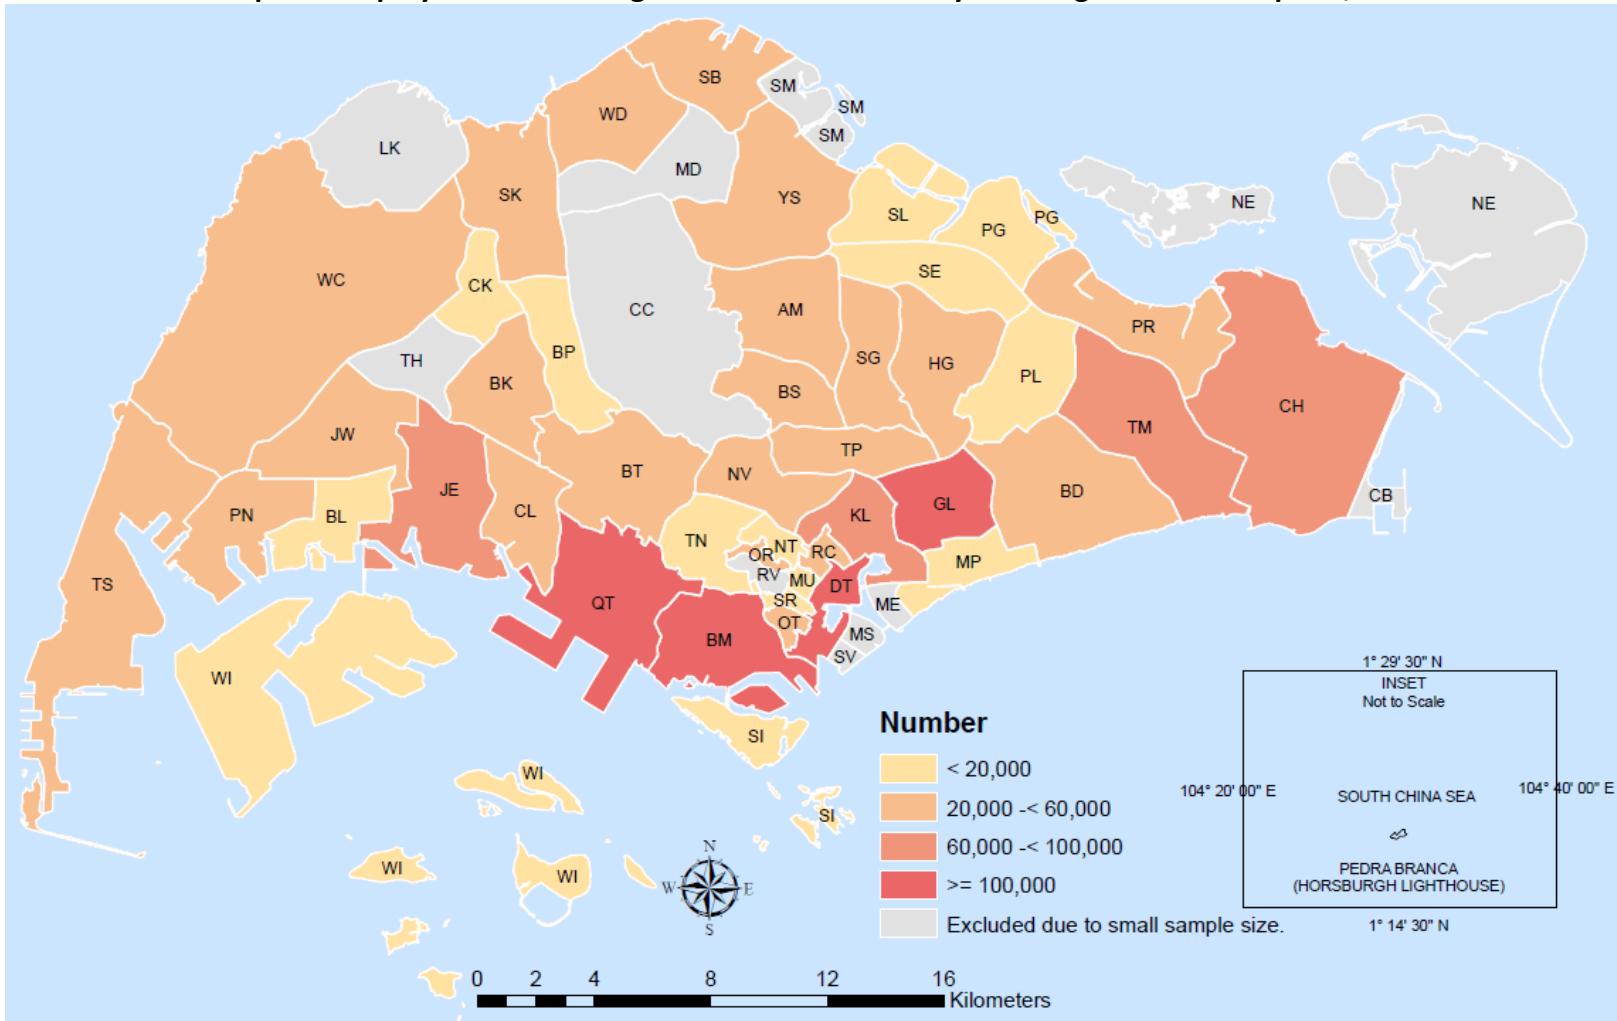

followed by the North-East region at 65,900, the East region at 51,100, the West region at 47,600 and the North region at 27,900.

Almost 80.0 per cent of the resident workforce had their workplace located in a different planning area from their homes in 2020 (Chart 6.3). Employed residents in older age groups tended to have their workplace located in the same planning area as their homes, or have no fixed location for work.

Chart 6.3 Employed Residents Aged 15 Years and Over by Workplace Location, 2020

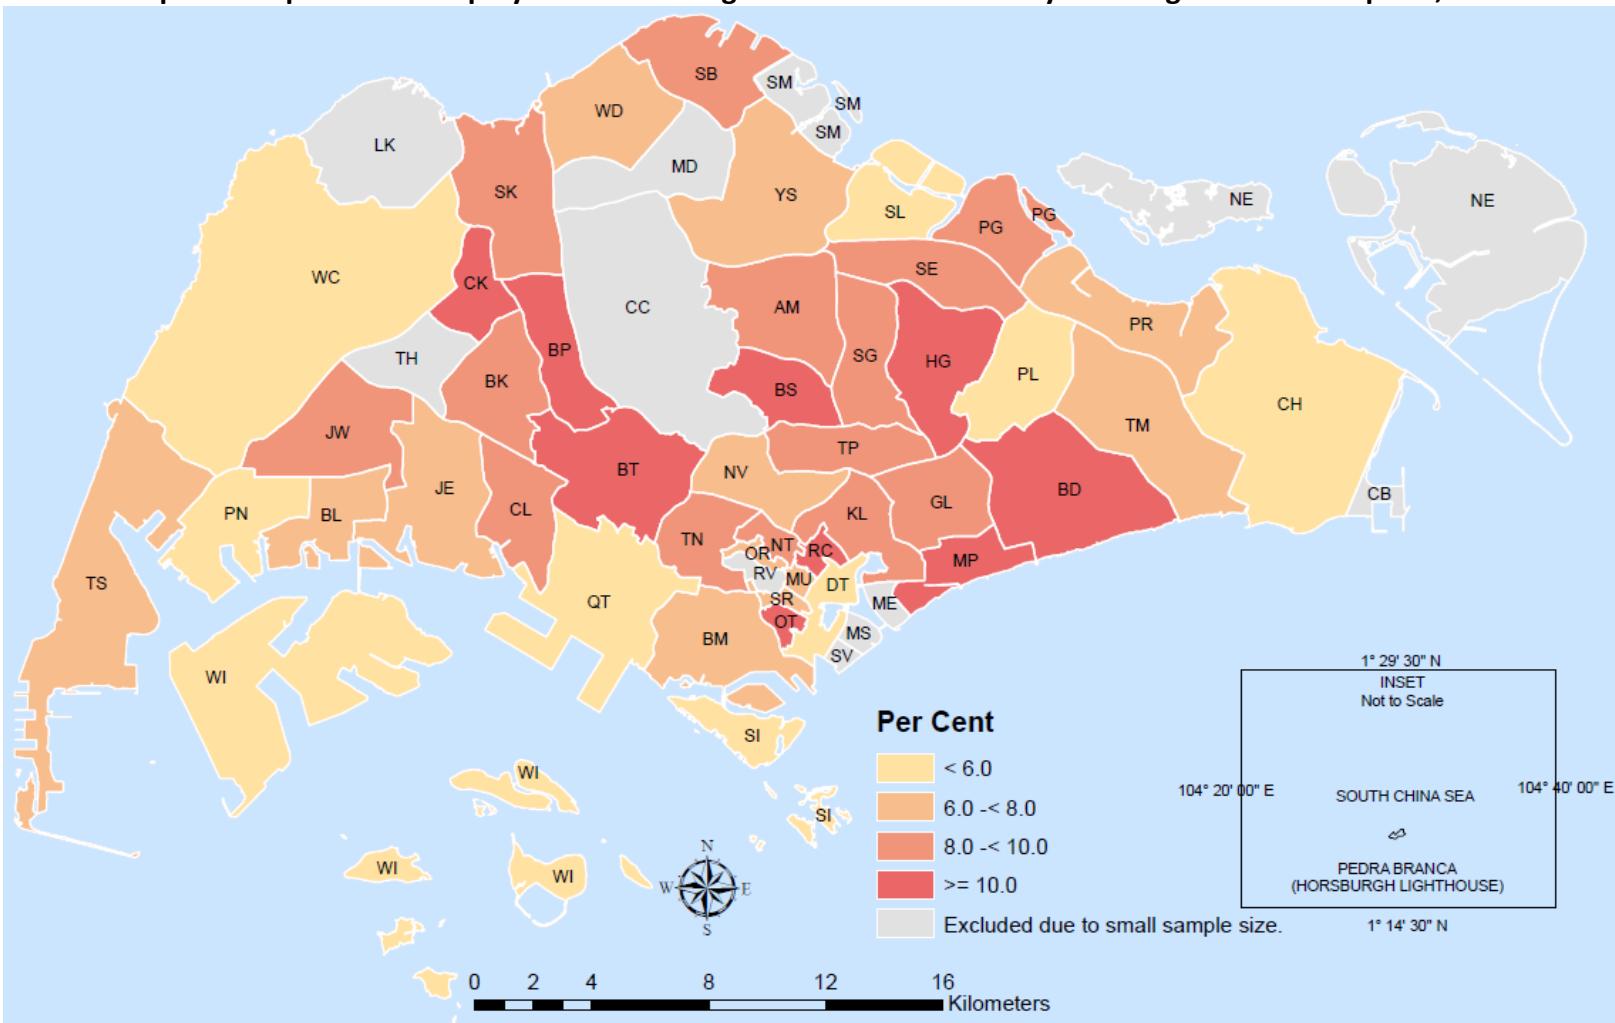

Map 6.1 Employed Residents Aged 15 Years and Over by Planning Area of Workplace, 2020

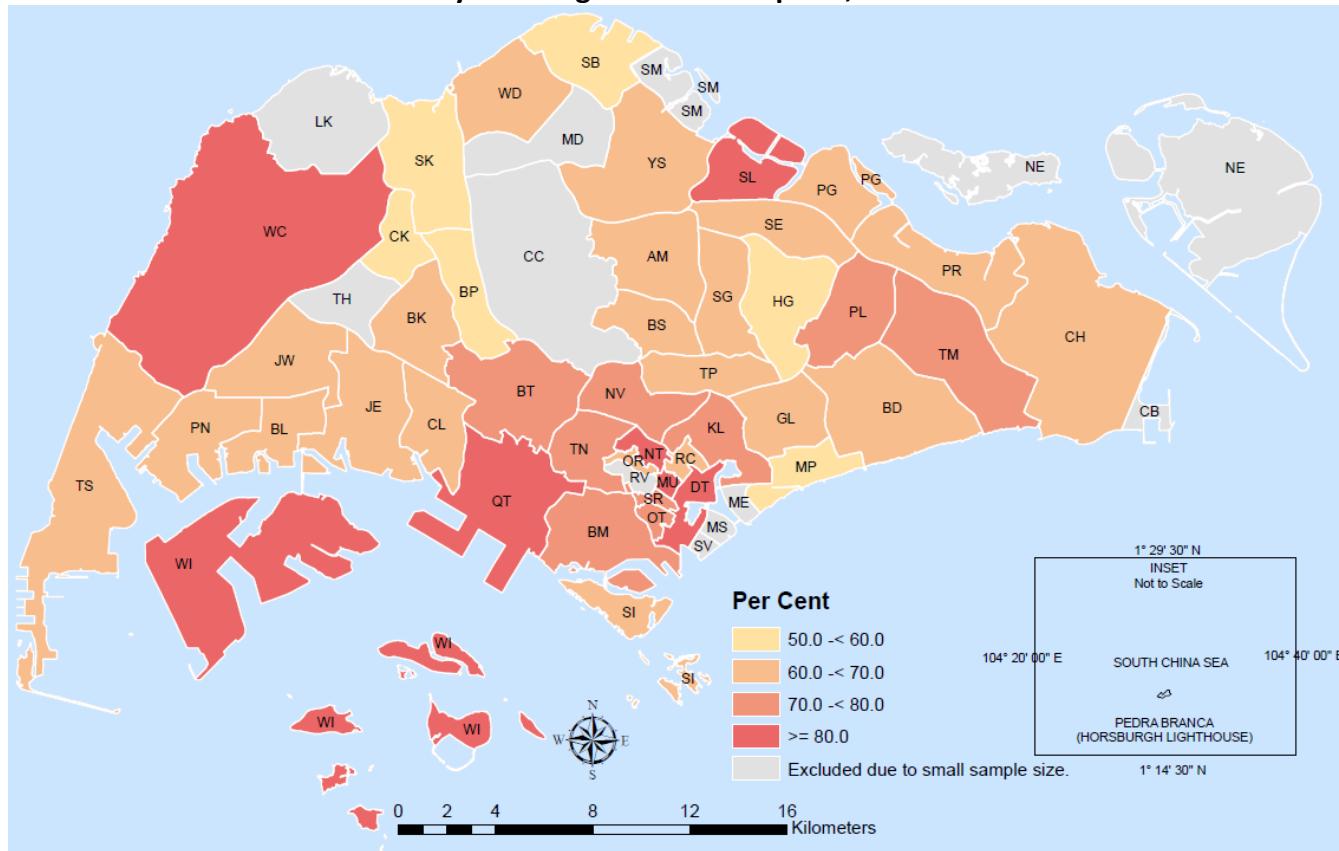

Note: Published map is based on the Urban Redevelopment Authority's Master Plan 2019 planning area boundaries and the Singapore Land Authority's 2020 Singapore island profile. The Master Plan 2019 is a forward-looking guiding plan for Singapore's development in the medium term over the next 10 to 15 years and the planning boundaries may not coincide with existing developments for some areas.

Map 6.2 Proportion of Employed Residents Aged 65 Years and Over by Planning Area of Workplace, 2020

Note: Published map is based on the Urban Redevelopment Authority's Master Plan 2019 planning area boundaries and the Singapore Land Authority's 2020 Singapore island profile. The Master Plan 2019 is a forward-looking guiding plan for Singapore's development in the medium term over the next 10 to 15 years and the planning boundaries may not coincide with existing developments for some areas.

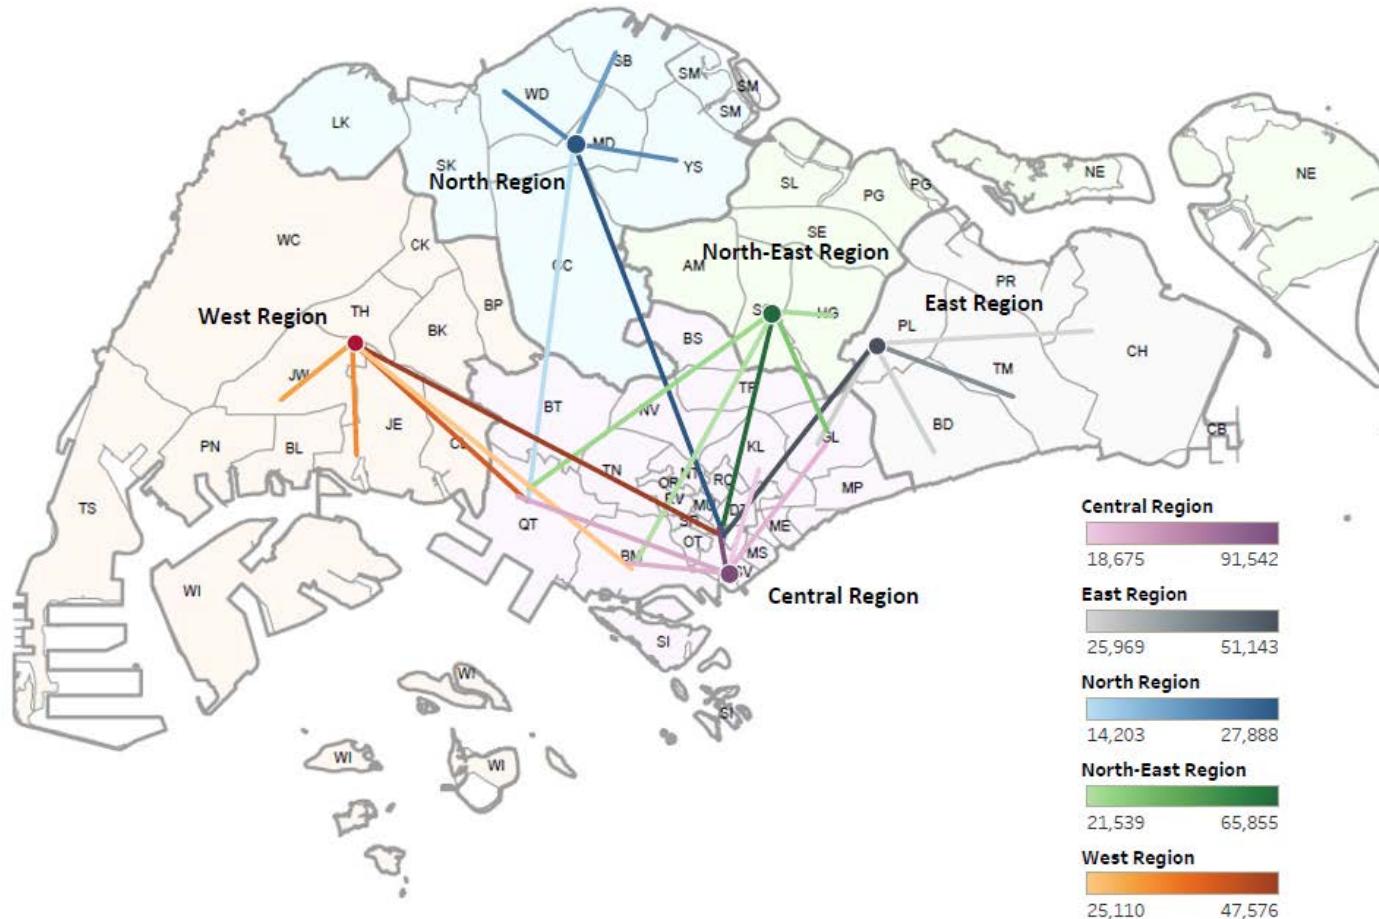

Map 6.3 Proportion of Employed Residents Aged 15 Years and Over with at Least Post-Secondary Qualification¹⁰ by Planning Area of Workplace, 2020

Note: Published map is based on the Urban Redevelopment Authority's Master Plan 2019 planning area boundaries and the Singapore Land Authority's 2020 Singapore island profile. The Master Plan 2019 is a forward-looking guiding plan for Singapore's development in the medium term over the next 10 to 15 years and the planning boundaries may not coincide with existing developments for some areas.

¹⁰ Data pertain to residents who were not attending educational institutions as full-time students and include those who were upgrading their qualifications through part-time courses.

Map 6.4 Top 5 Planning Areas of Workplace where Employed Residents Aged 15 Years and Over from various Planning Region of Residence travelled to, 2020

Note: This map shows the top 5 planning areas of workplace corresponding to employed residents from each planning region of residence (i.e. Central, East, North-East, North and West). From each planning region of residence, the relative size of employed residents travelling to the destination planning area of workplace is illustrated by the colour intensity of the lines (higher numbers represented by darker shades and lower numbers are in light shades). The nodes representing the planning regions of residence are approximations of the region to aid visualisation.

CHAPTER 7

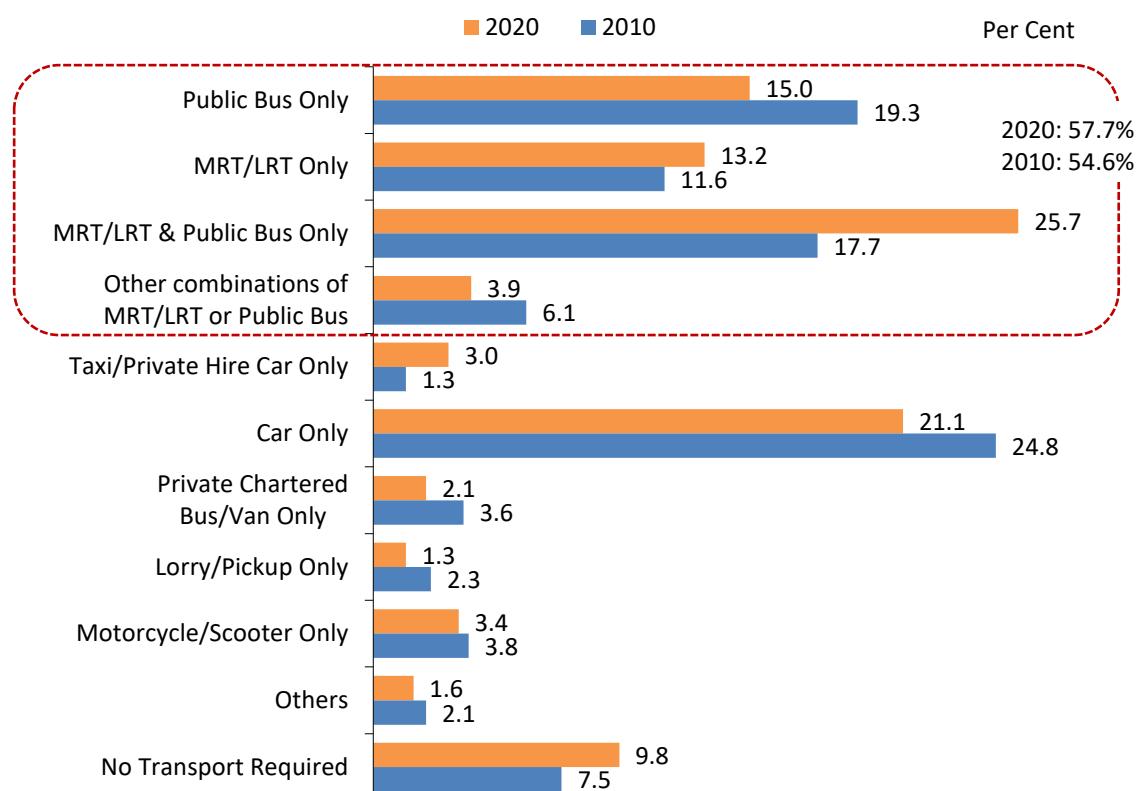

TRANSPORT¹¹

Usual Mode of Transport to Work

Public bus and the Mass Rapid Transit (MRT)/Light Rail Transit (LRT) continued to be key modes of transport to work among employed residents. In 2020, 57.7 per cent took public bus, MRT/LRT or combinations of MRT/LRT or public bus to work, up from 54.6 per cent in 2010 (Chart 7.1). This was mainly due to an increase in the proportion who commuted to work by MRT/LRT with a transfer to or from public bus, in line with the expansion of the MRT/LRT network. Conversely, the share of those who commuted to work by bus only declined over the same period.

Slightly over one-fifth of employed residents travelled to work only by car in 2020, down from about a quarter in 2010. The proportion who travelled only by taxi or private hire car increased from 1.3 per cent to 3.0 per cent over the same period.

**Chart 7.1 Proportion of Employed Residents Aged 15 Years and Over
by Mode of Transport to Work**

¹¹ Data refers to the usual mode of transport to work/school based on the usual workplace/school location and not the temporary arrangements due to COVID-19 measures.

Mode of Transport to Work by Housing Type

In 2020, 69.5 per cent of employed residents staying in HDB 1- and 2- room flats commuted to work by public bus, MRT/LRT or other combinations of MRT/LRT or public bus (Table 7.1). The corresponding proportions among other HDB dwellers were between 57.9 per cent for those staying in HDB 5-room or executive flats and 67.4 per cent for those staying in HDB 3-room flats.

In comparison, 52.9 per cent of employed residents staying in landed properties relied on cars to travel to work in 2020, though this was a decrease from 59.6 per cent in 2010. Similarly, the proportion of employed residents staying in condominiums and other apartments who relied on cars as their only mode of transport to work decreased to 39.3 per cent in 2020, from 50.3 per cent in 2010.

**Table 7.1 Proportion of Employed Residents Aged 15 Years and Over

^{1/} Data for 2010 includes non-privatised Housing and Urban Development Company (HUDC) flats.

^{2/} Includes HDB studio apartments.

Mode of Transport to Work by Planning Area of Residence

In 2020, the proportion who commuted to work by combinations of MRT/LRT or public bus was highest among employed residents staying in Toa Payoh (63.1 per cent). Seven other planning areas, including Sembawang, Bukit Merah, Queenstown, Geylang, Ang Mo Kio, Kallang and Yishun, each had at least 60.0 per cent of employed residents who commuted to work by combinations of MRT/LRT or public bus (Map 7.1).

The proportion who took only public bus to work was higher among those staying in Marine Parade (26.1 per cent), Bukit Merah (23.7 per cent) and Jurong East (20.5 per cent) (Map 7.2).

In comparison, the proportion who commuted to work by car only was higher among employed residents staying in Tanglin (50.3 per cent), Bukit Timah (49.2 per cent), followed by Marine Parade, River Valley and Novena (between 31.0 and 36.6 per cent) (Map 7.3).

Travelling Time to Work

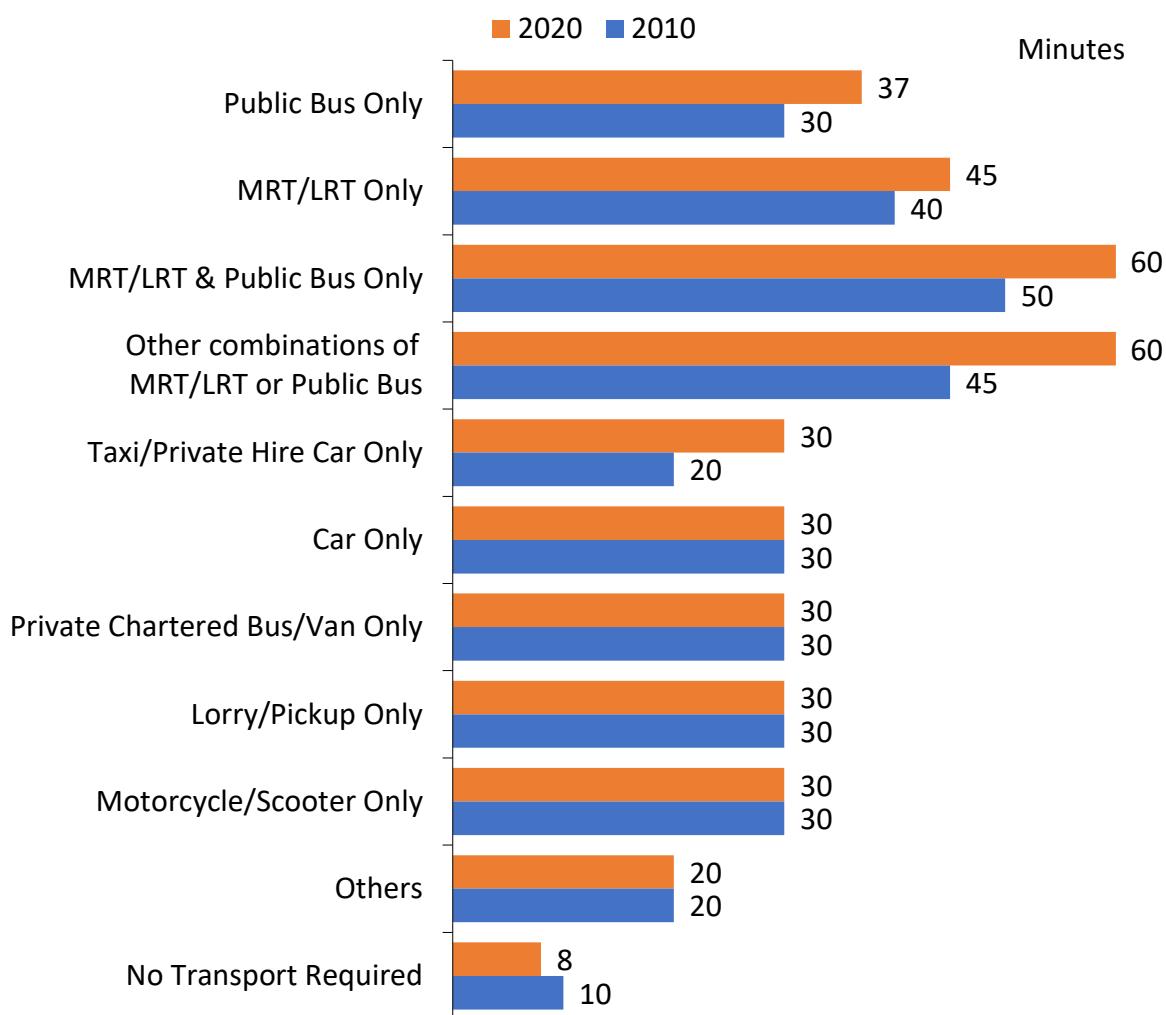

In 2020, the median travelling time to work was 37 minutes for employed residents commuting to work by public bus only (Chart 7.2). Journeys to work by MRT/LRT were typically longer. The median travelling time was 45 minutes for those who travelled to work by MRT/LRT only. For those who travelled by MRT/LRT with a transfer to/from public bus, the median travelling time was 60 minutes, same as those who commute by other combinations of MRT/LRT or public bus.

For those who travelled to work by car, taxi/private hire car, private chartered bus/van, lorry/pickup or motorcycle/scooter, the median travelling time to work was shorter, at 30 minutes.

Between 2010 and 2020, the median travelling time increased for those who took combinations of MRT/LRT or bus to work, likely due to longer distances travelled via these transport modes¹². Over the same period, travelling time similarly rose for those who took taxi or private hire car only to work. For those who took other modes of transport to work, the median travelling time in 2020 remained unchanged from 2010.

¹² According to findings from the Household Interview Travel Survey (HITS) 2008 and 2016 conducted by the Land Transport Authority (LTA), the average public transport travel distance to work increased by 17.5% from 2008 to 2016, i.e. from 10.3km to 12.1km. Land-use developments (e.g. growth of townships and growth of employment in certain areas) may be a contributing factor, such that home-work locations are further apart. The opening of new MRT lines (e.g. Circle Line, Downtown Line) and longer trunk bus services could also have enabled more employed persons to make longer trips via MRT/LRT or public buses.

Chart 7.2 Median Travelling Time to Work Among Employed Residents Aged 15 Years and Over by Mode of Transport

Travelling Time to Work by Planning Area of Residence

Employed residents staying in planning areas in or near the central business district generally had shorter travelling times to work than those staying further away. In 2020, the median travelling time to work was less than 25 minutes among employed residents staying in Downtown Core and River Valley (Map 7.4).

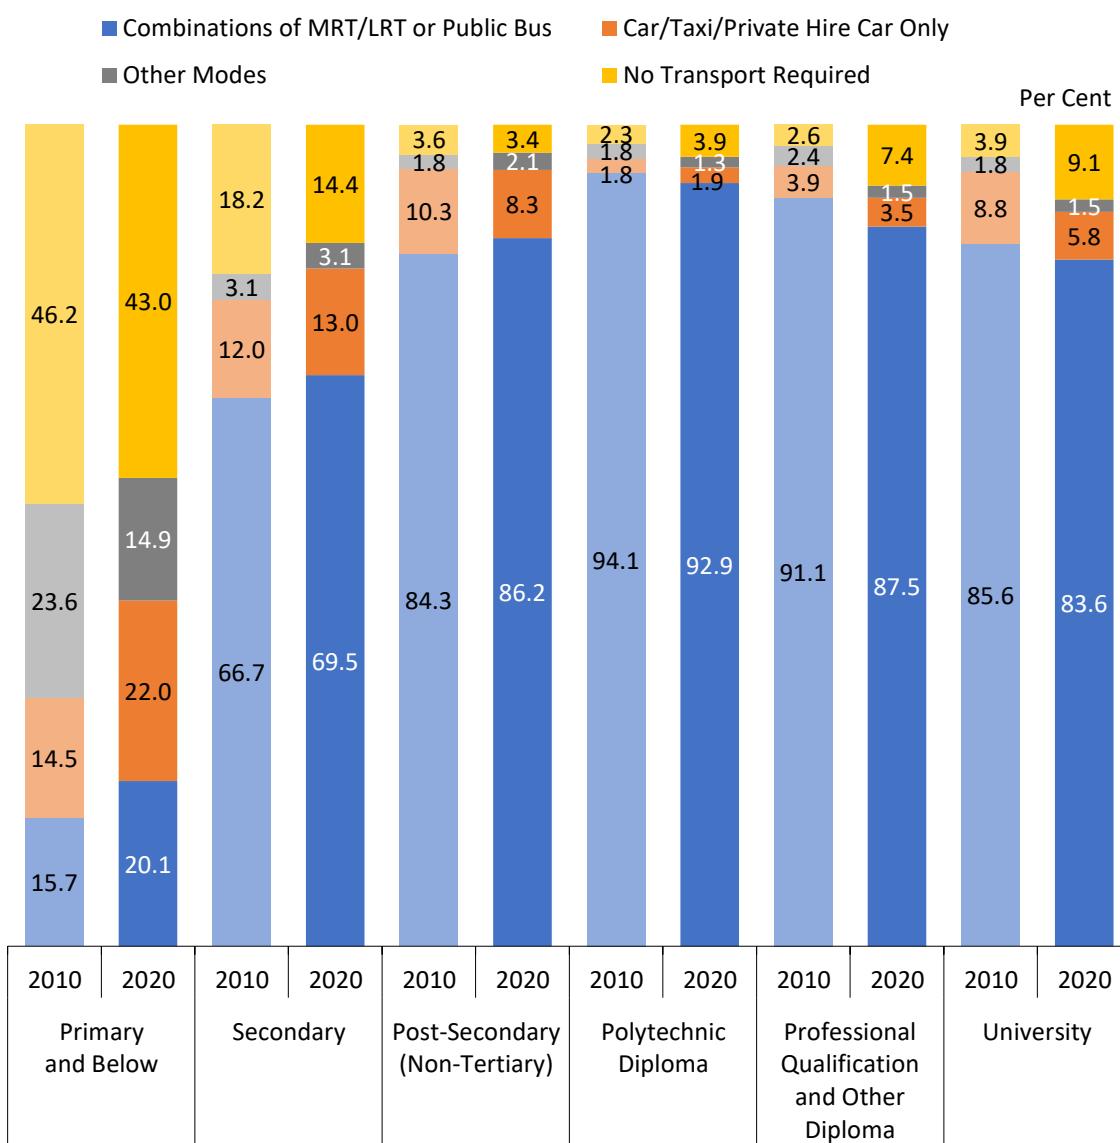

In contrast, the median travelling time to work was 45 minutes for employed residents staying in Bukit Panjang, Choa Chu Kang, Punggol, Sembawang, Sengkang, Woodlands and Yishun.

Usual Mode of Transport to School

Reflecting the close proximity of the schools to their homes, 43.0 per cent of pre-primary and primary school students did not require any mode of transport to school in 2020. This was slightly lower than 46.2 per cent in 2010 (Chart 7.3). Conversely, the corresponding proportion with car, taxi or private hire car only as their usual mode of transport to school increased from 14.5 per cent in 2010 to 22.0 per cent in 2020.

For students attending secondary or higher level of education, a large majority continued to take combinations of MRT/LRT or public bus to school. For university students, those who did not require any transport increased from 3.9 per cent in 2010 to 9.1 per cent in 2020.

**Chart 7.3 Resident Students Aged 5 Years and Over
by Mode of Transport to School and Level of Education Attending**

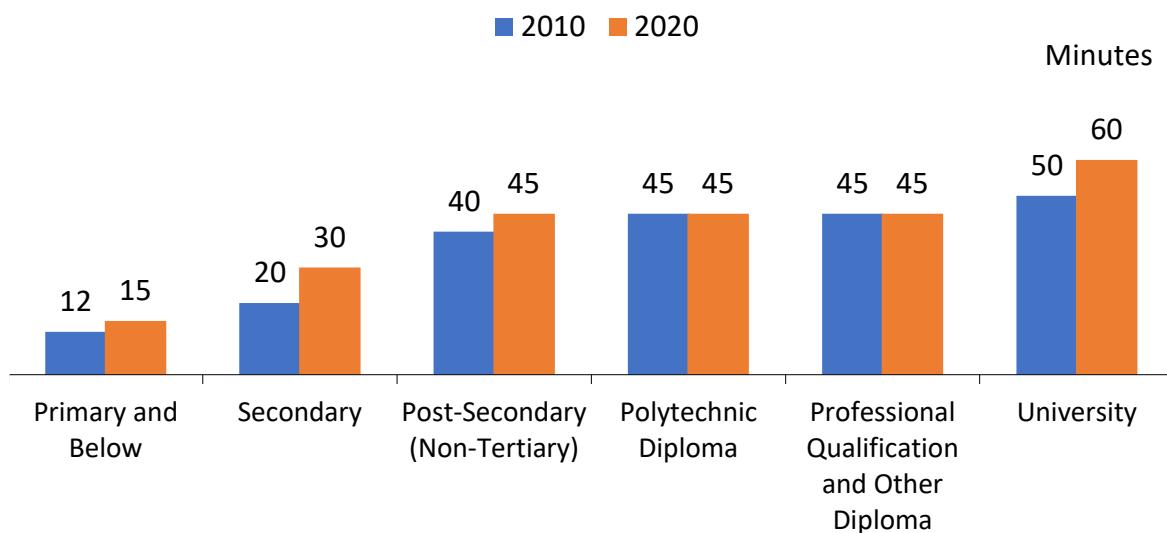

Travelling Time to School

The median travelling time to school was 45 minutes for students attending post-secondary (non-tertiary) and diploma and professional qualification courses, and 60 minutes for university students in 2020 (Chart 7.4). In comparison, the median travelling time was shorter for pre-primary and primary school students (15 minutes) and secondary school students (30 minutes), reflecting the shorter distances between school and home for these students.

Compared to 2010, the median travelling time to school increased¹³ for most students, except for those attending diploma and professional qualification courses.

Chart 7.4 Median Travelling Time to School Among Resident Students Aged 5 Years and Over by Level of Education Attending

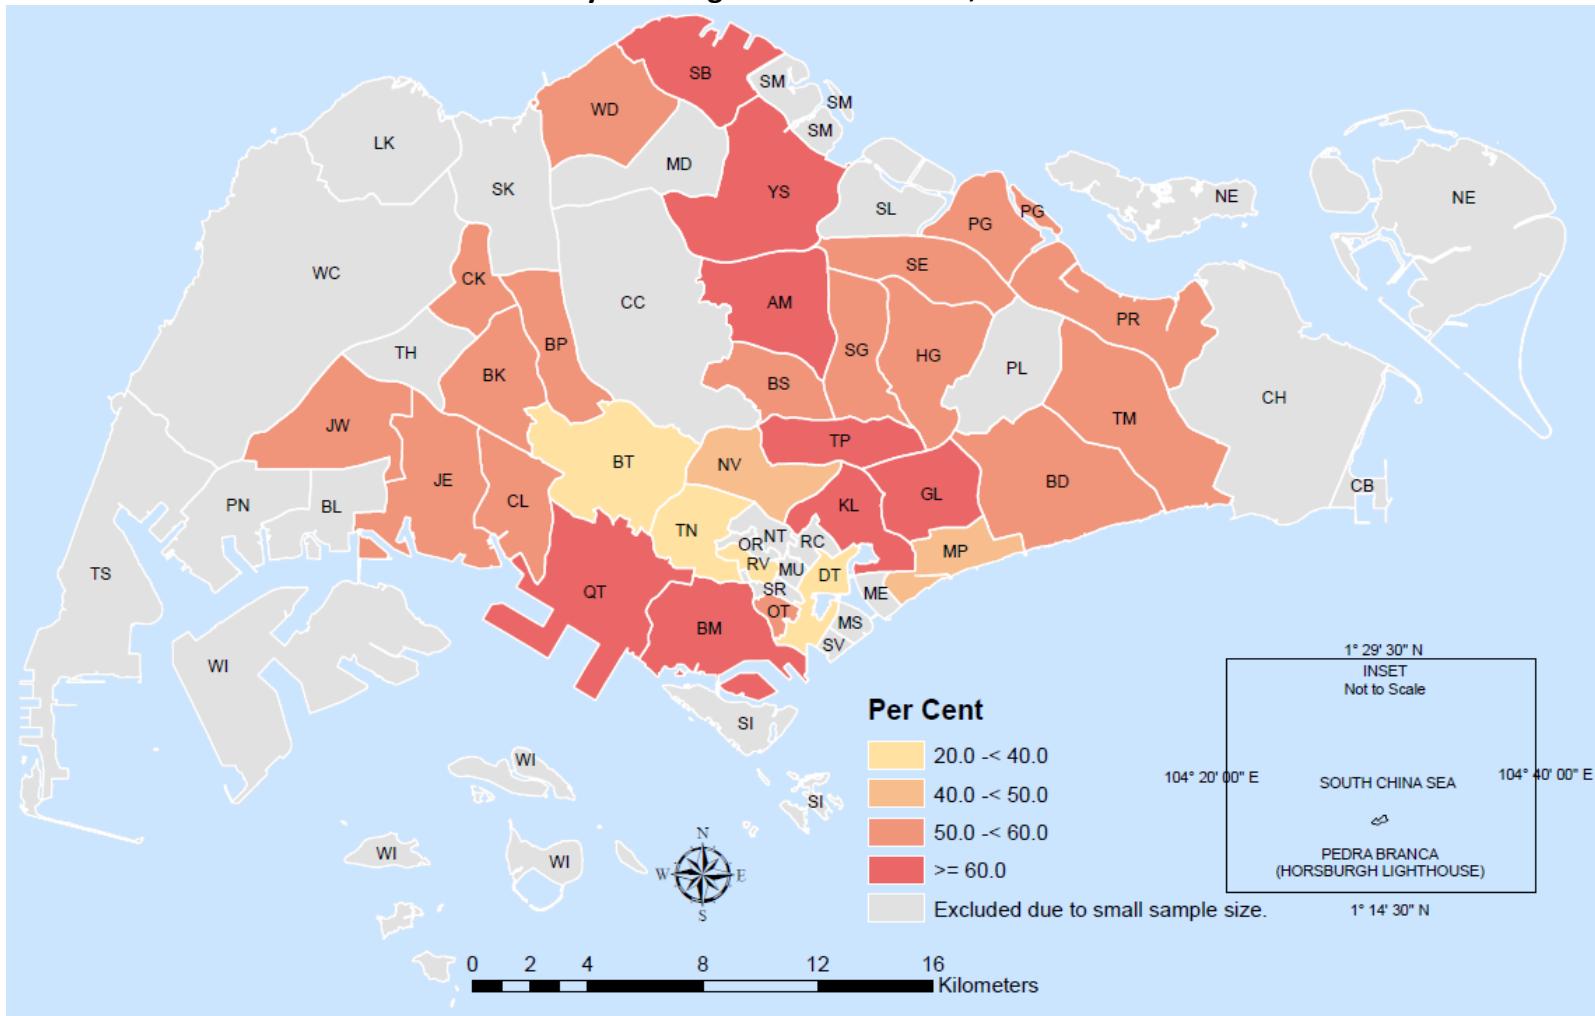

Travelling Time to School by Planning Area of Residence

In contrast to the relatively shorter travelling times among employed residents staying near the central business district, resident students staying in Downtown Core attending primary or pre-primary schools had the longest median travelling time to school at 30 minutes, followed by River Valley at 20 minutes. The travelling time to school was relatively shorter, at a median of less than 15 minutes for those staying in Punggol, Sembawang, Sengkang or Woodlands (Map 7.5).

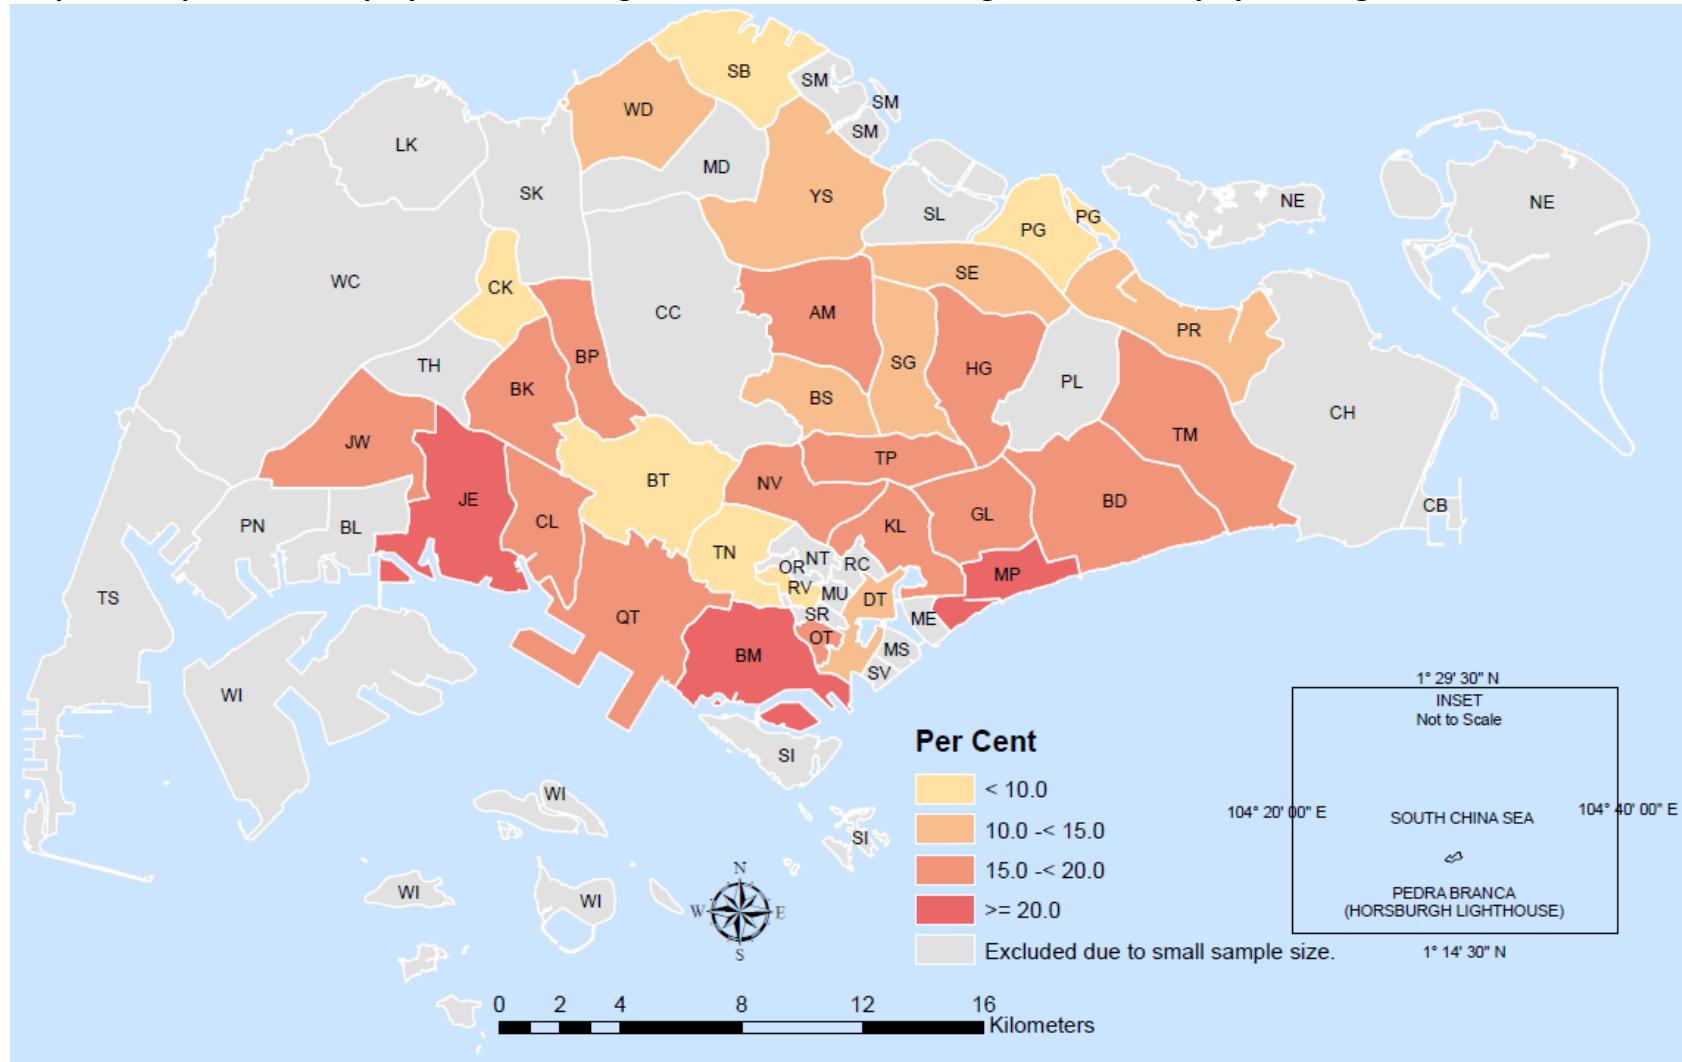

¹³ According to findings from the HITS 2008 and 2016 conducted by the LTA, the average public transport travel distance to school increased by 9.0% from 2008 to 2016, i.e. from 7.8km to 8.5km. Land-use developments (e.g. growth of townships and changes in school locations) may be a contributing factor, such that home-school locations are further apart. The opening of new MRT lines (e.g. Circle Line, Downtown Line) and longer trunk bus services could also have enabled more students to make longer trips via MRT/LRT or public buses.

Difficulty Performing Basic Activities*

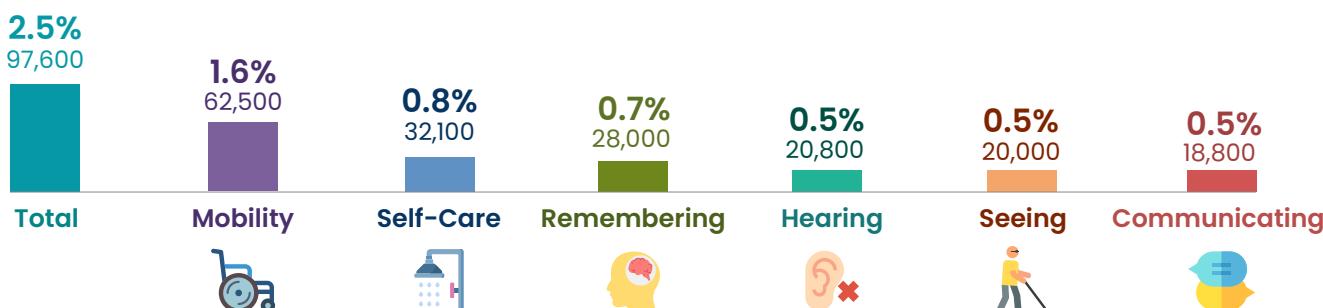

*Basic activities refer to seeing, hearing, mobility (walking or climbing steps), remembering or concentrating, self-care (washing all over or dressing), and communicating (understanding or being understood).

Data on difficulty performing basic activities were captured for the first time in Census 2020.

Residents Unable to Perform / with A Lot of Difficulty in At Least One Basic Activity

Residents with a lot of difficulty** performing activities relating to mobility constituted the largest group, followed by self-care.

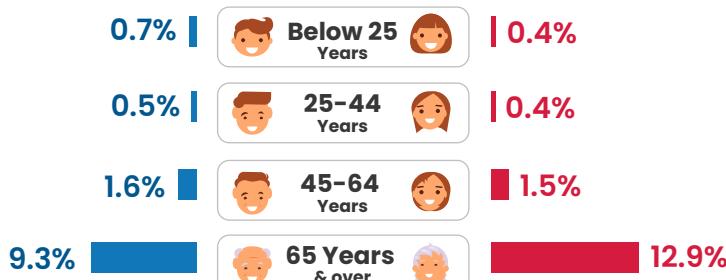

By Age and Sex

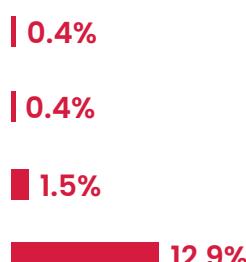

Elderly faced more difficulty performing basic activities.

Unable to Perform / with A Lot of Difficulty in At Least One Basic Activity

Males

Females

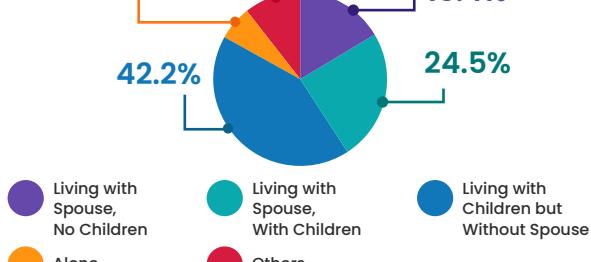

By Elderly Living Arrangement *

Majority of elderly with a lot of difficulty** lived with other people.

Unable to Perform / with A Lot of Difficulty in At Least One Basic Activity

6.4% 10.5% 16.4% 24.5% 42.2%

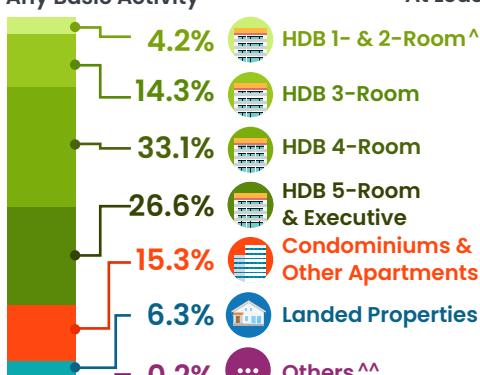

* Resident Population Aged 65 Years and Over in Resident Households.

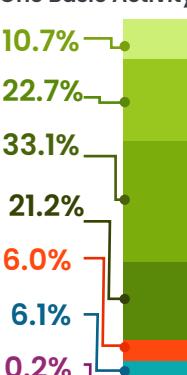

By Dwelling Type

Proportionately more residents with a lot of difficulty** lived in HDB 3-room or smaller flats.

Without A Lot of Difficulty in Performing Any Basic Activity

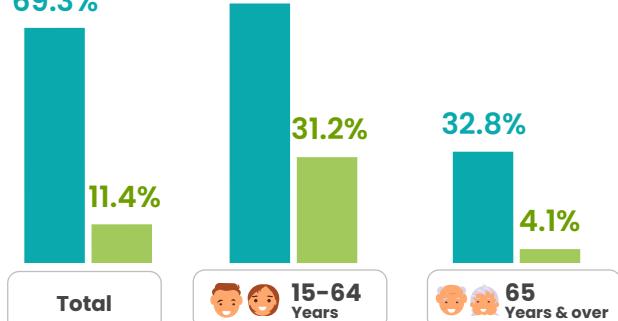

Unable to Perform / with A Lot of Difficulty in At Least One Basic Activity

By Labour Force Participation Rate

Proportionately fewer residents with a lot of difficulty** were in the labour force.

69.3% 76.5%

Without A Lot of Difficulty in Performing Any Basic Activity
Unable to Perform / with A Lot of Difficulty in At Least One Basic Activity

^ Includes HDB studio apartments.

^^ Refers to other types of dwelling not shown e.g. non-HDB shophouses, etc.

** Includes those unable to perform at least one basic activity.

CHAPTER 8

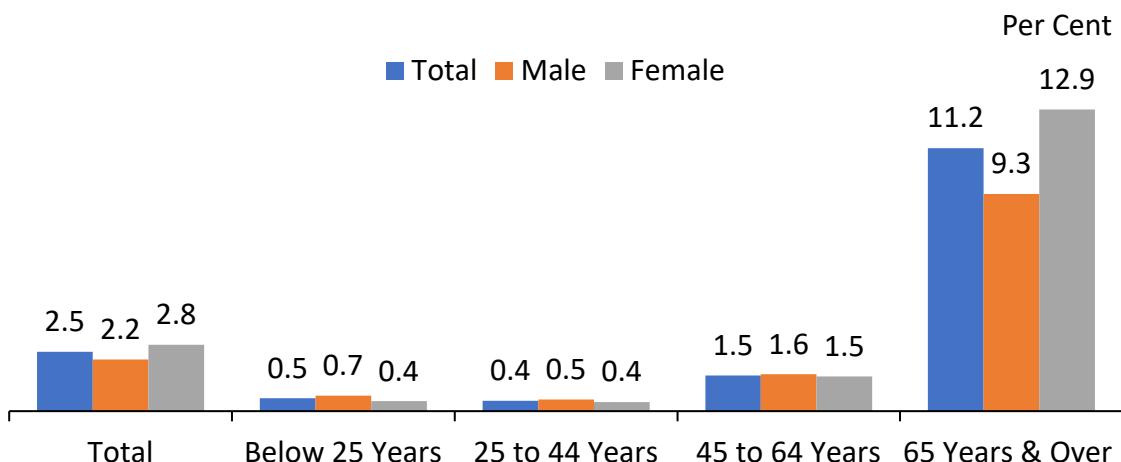

DIFFICULTY PERFORMING BASIC ACTIVITIES¹⁴

Difficulty Performing Basic Activities by Age Group and Sex

There were some 97,600 residents aged 5 years and over (or 2.5 per cent) who were unable to perform or had a lot of difficulty performing at least one basic activity in 2020 (Chart 8.1). The majority of them were aged 65 years and over.

A higher proportion of females (2.8 per cent) than males (2.2 per cent) were unable to perform or had a lot of difficulty performing at least one basic activity. This could be partially due to the longer life expectancy of females. Among residents aged 65 years and over, 12.9 per cent of females were unable to perform or had a lot of difficulty performing at least one basic activity, compared to 9.3 per cent for males. At younger ages, the proportions were similar for males and females.

Chart 8.1 Proportion of Resident Population Aged 5 Years and Over Unable to Perform/ with A Lot of Difficulty in At Least One Basic Activity by Age Group and Sex, 2020

Number ('000)

Total	97.6	4.7	5.2	18.2	69.4
Male	41.1	2.9	2.8	9.2	26.2
Female	56.5	1.8	2.4	9.1	43.2

¹⁴ Basic Activities refer to seeing, hearing, mobility (walking or climbing steps), remembering or concentrating, self-care (such as washing all over or dressing), and communicating (for example understanding or being understood).

Domain of Difficulty by Age Group

In 2020, 62,500 residents aged 5 years and over (or 1.6 per cent) were unable to perform or had a lot of difficulty performing activities relating to mobility (Charts 8.2 and 8.3). Those who were unable to perform or had a lot of difficulty performing self-care activities formed the next largest group at 32,100 (or 0.8 per cent). For residents aged 65 years and over, the corresponding proportions were higher at 8.0 and 4.2 per cent respectively.

Chart 8.2 Resident Population Aged 5 Years and Over Unable to Perform/ with A Lot of Difficulty in Basic Activity by Domain of Difficulty and Age Group, 2020

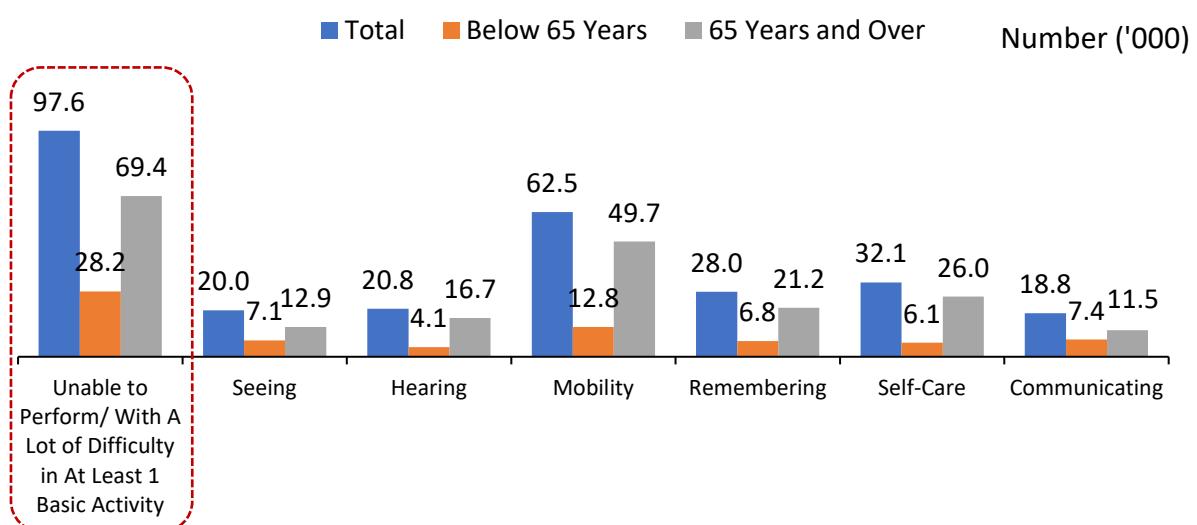

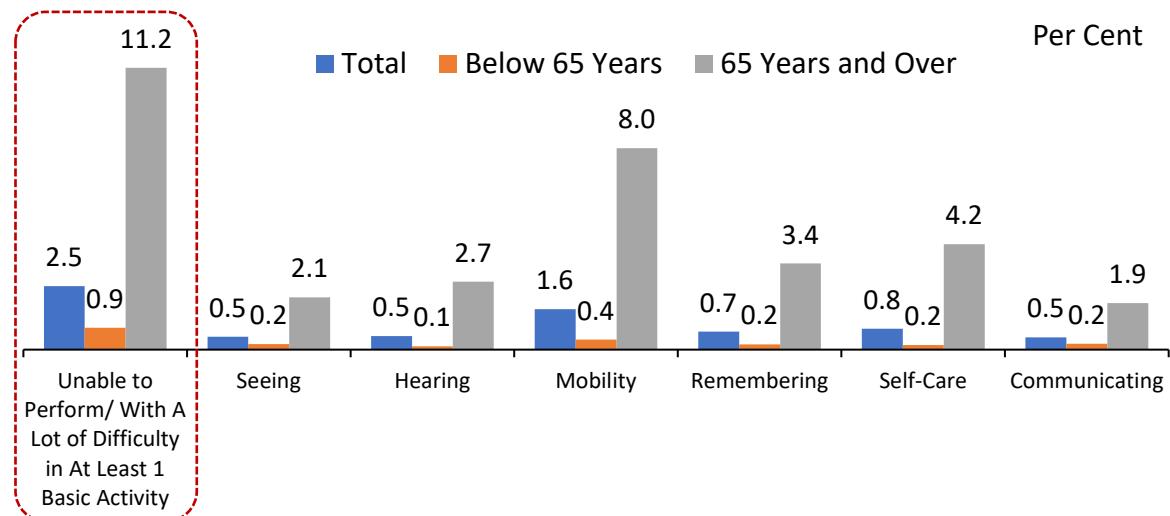

Chart 8.3 Proportion of Resident Population Aged 5 Years and Over Unable to Perform/ with A Lot of Difficulty in Basic Activity by Domain of Difficulty and Age Group, 2020

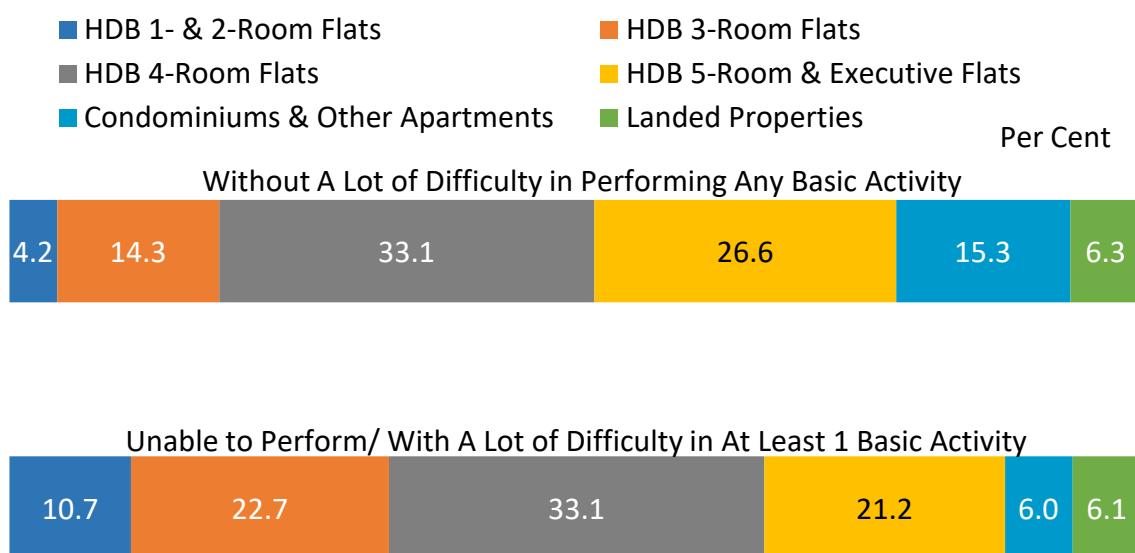

Note: For Charts 8.2 and 8.3, the number or proportion of residents unable to perform or with a lot of difficulty in specific basic activities do not add up to the overall figure, as there are residents unable to perform or with a lot of difficulty in multiple basic activities.

Difficulty in Basic Activities by House Type

Proportionately more residents who were unable to perform or had a lot of difficulty performing at least one basic activity lived in HDB 3-room or smaller flats (combined 33.5 per cent) than those who did not have a lot of difficulty in performing any basic activity (18.5 per cent) in 2020 (Chart 8.4).

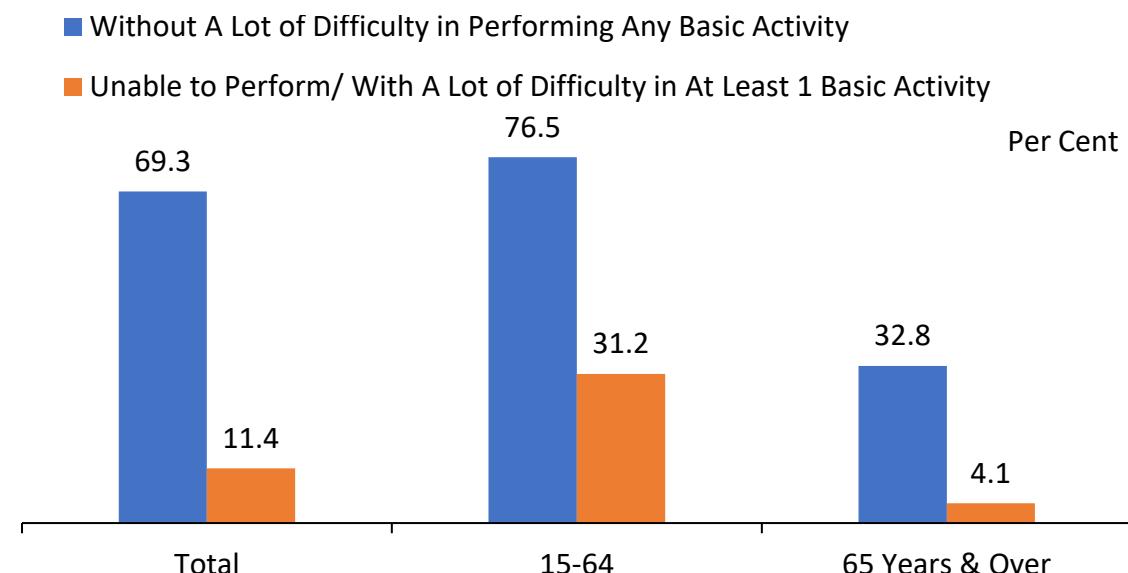

Chart 8.4 Resident Population Aged 5 Years and Over by Difficulty in Performing Basic Activities and Type of Dwelling, 2020

Labour Force Participation Rate by Age Group and Domain of Difficulty

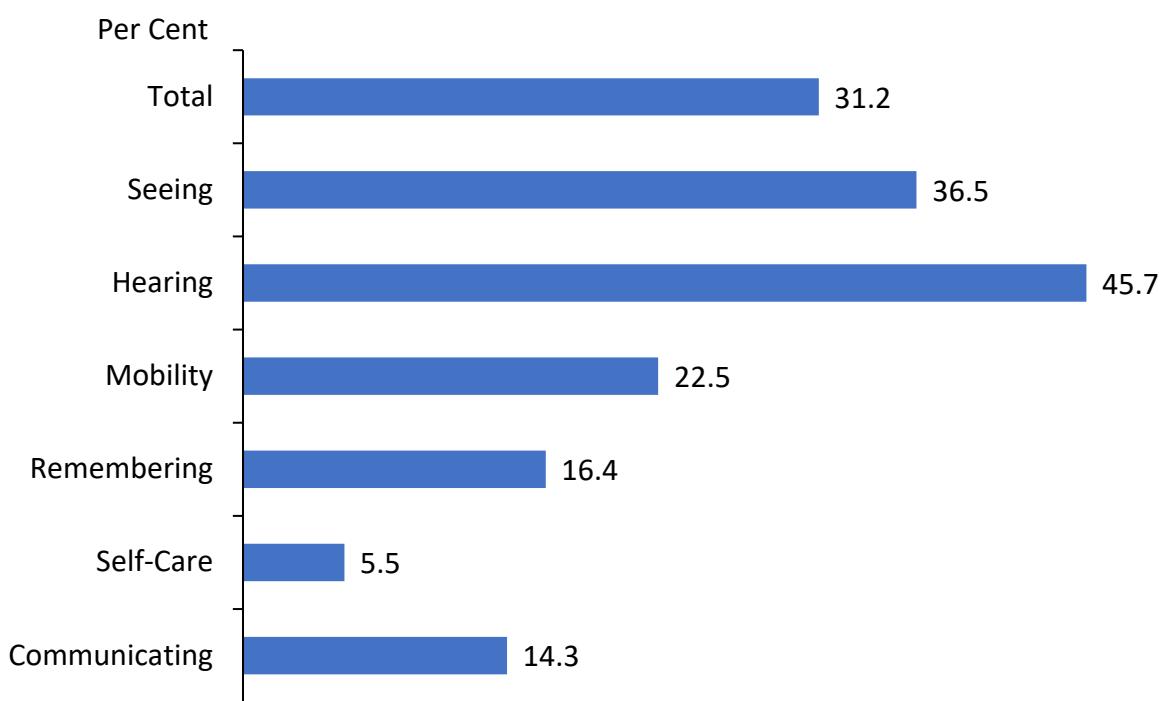

Among residents who were unable to perform or had a lot of difficulty performing at least one basic activity, about 11.4 per cent (or about 10,900 persons) were in the labour force in 2020, significantly lower than the 69.3 per cent for residents without a lot of difficulty performing any basic activity (Chart 8.5). Excluding elderly aged 65 years and over, 31.2 per cent of those aged 15-64 years who were unable to perform or had a lot of difficulty performing at least one basic activity were in the labour force.

Chart 8.5 Labour Force Participation Rate Among Resident Population Aged 15 Years and Over by Difficulty in Performing Basic Activities and Age Group, 2020

Across the various domains of difficulty, residents aged 15-64 years who were unable to hear, or had a lot of difficulties hearing, had the highest labour force participation rate at 45.7 per cent in 2020, followed by those who were unable to see, or had a lot of difficulties seeing at 36.5 per cent (Chart 8.6).

Chart 8.6 Labour Force Participation Rate Among Residents Aged 15 to 64 Years Unable to Perform/ with A Lot of Difficulty in At Least One Basic Activity, by Domain of Difficulty, 2020

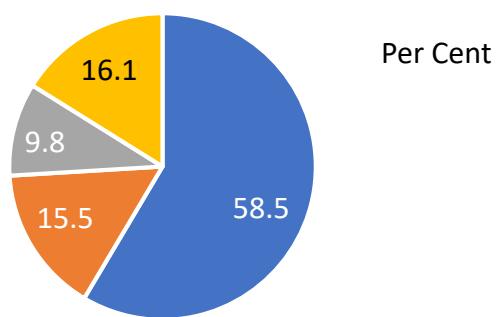

Usual Mode of Transport to Work

Close to 6 in 10 resident employed persons aged 15 years and over who were unable to perform or had a lot of difficulty performing at least one basic activity (58.5 per cent) took combinations of MRT/LRT or public bus to work in 2020 (Chart 8.7). Another 15.5 per cent travelled to work by car, taxi or private hire car only, while 16.1 per cent did not require transport.

Chart 8.7 Resident Employed Persons Aged 15 Years and Over Unable to Perform/ with A Lot of Difficulty in At Least One Basic Activity by Usual Mode of Transport to Work, 2020

- Combinations of MRT/LRT or Public Bus
- Car/Taxi/Private Hire Car Only
- Other Modes
- No Transport Required

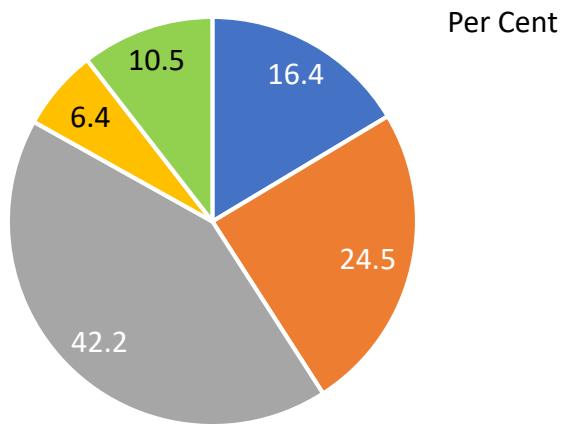

Note: Data exclude working persons who were overseas for at least 6 months.

Living Arrangement of Elderly Residents

In 2020, over 9 in 10 residents aged 65 years and over in resident households who were unable to perform or had a lot of difficulty performing at least one basic activity were living with other people (Chart 8.8). Most of them were living with their spouse and/or children (83.1 per cent).

Chart 8.8 Resident Population Aged 65 Years and Over in Resident Households Unable to Perform/ with A Lot of Difficulty in At Least One Basic Activity by Living Arrangement, 2020

- Living with Spouse, No Children ■ Living with Spouse, With Children
- Living With Children but Without Spouse ■ Alone
- Others

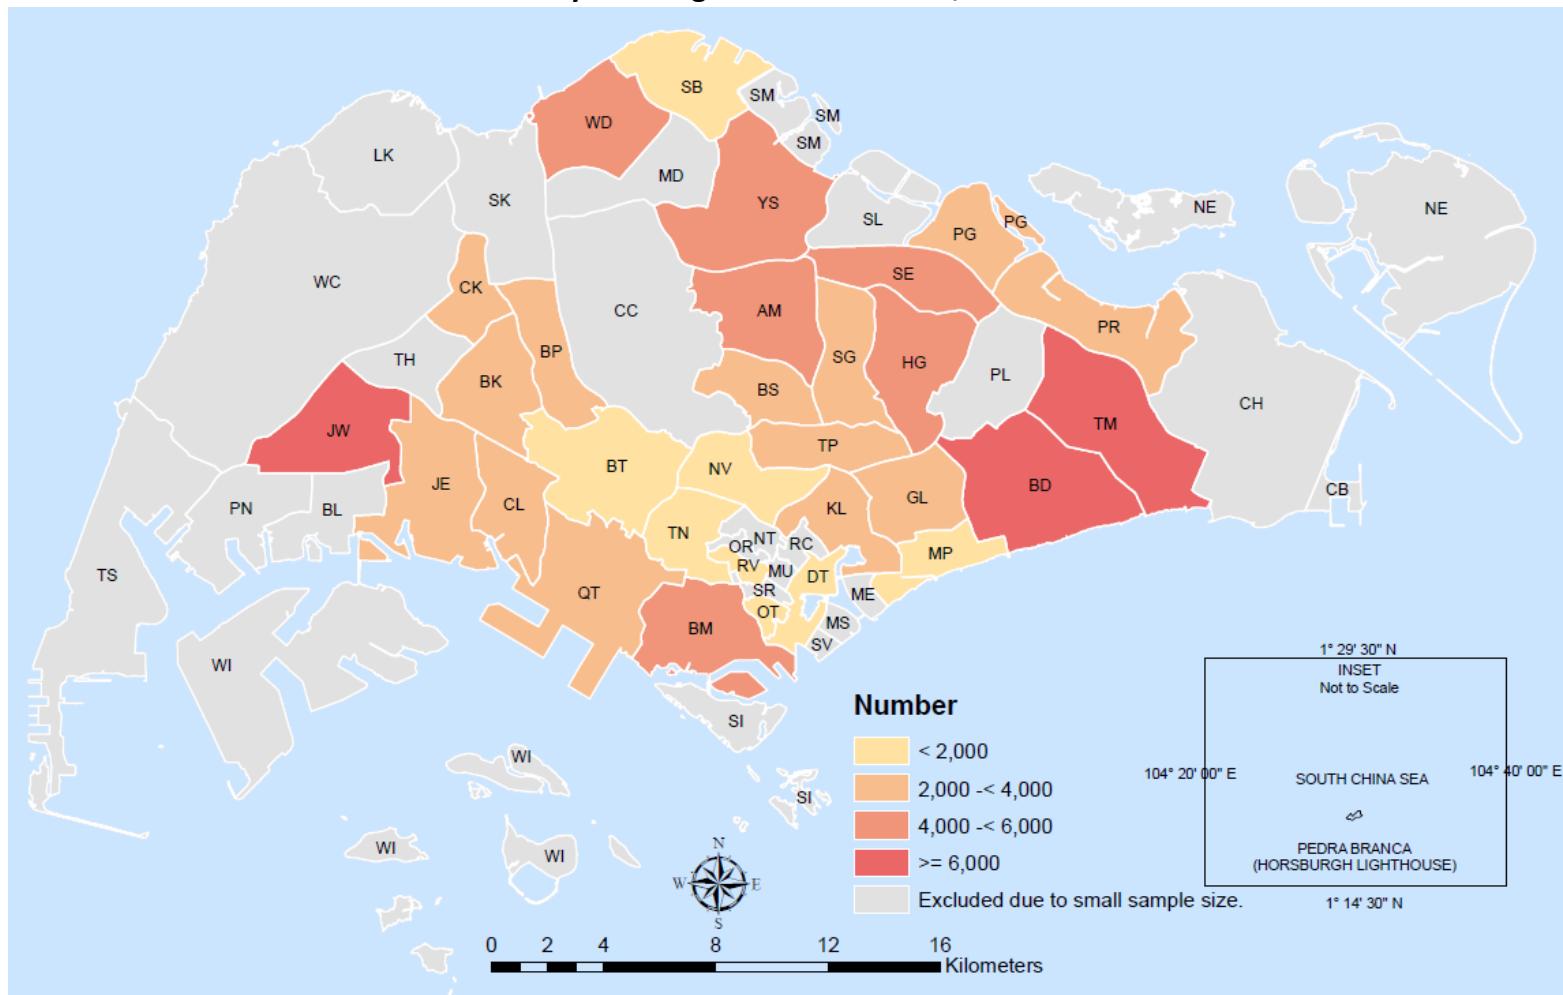

Planning Area of Residence

Bedok, Jurong West and Tampines had the highest number of residents aged 5 years and over who were unable to perform or had a lot of difficulty performing at least one basic activity (Map 8.1). Corresponding to its larger population size, Bedok had the highest number of residents who were unable to perform or had a lot of difficulty performing at least one basic activity at 8,200.

Across planning areas of residence, the proportion of residents aged 5 years and over who were unable to perform or had a lot of difficulty performing at least one basic activity was low at around 1-4 per cent.

Map 8.1 Resident Population Aged 5 Years and Over Unable to Perform/ with A Lot of Difficulty in At Least One Basic Activity by Planning Area of Residence, 2020

Note: Published map is based on the Urban Redevelopment Authority's Master Plan 2019 planning area boundaries and the Singapore Land Authority's 2020 Singapore island profile. The Master Plan 2019 is a forward-looking guiding plan for Singapore's development in the medium term over the next 10 to 15 years and the planning boundaries may not coincide with existing developments for some areas.

Notes:

Planning areas refer to areas demarcated in the Urban Redevelopment Authority's Master Plan 2019.

Data refers to the usual workplace location and not the temporary arrangements due to COVID-19 measures.

Data pertain to residents who were not attending educational institutions as full-time students and include those who were upgrading their qualifications through part-time courses.

Glossary of Terms and Definitions

GLOSSARY OF TERMS AND DEFINITIONS

DEMOGRAPHIC AND SOCIAL CHARACTERISTICS

Age

Age refers to the number of completed years between a person's date of birth and the Census reference date of 30 June 2020.

Ethnic / Detailed Ethnic Group

Ethnic group is obtained from administrative sources and as declared by the person. The population is classified into the following four categories:

<i>Chinese</i>	This refers to persons of Chinese origin such as Hokkiens, Teochews, Cantonese, Hakkas, Hainanese, Foochows, Henghuas, Shanghainese, Hockchias, etc.
<i>Malays</i>	This includes persons of Malay or Indonesian origin, such as Javanese, Boyanese, etc.
<i>Indians</i>	This includes persons of Indian, Pakistani, Bangladeshi or Sri Lankan origin such as Tamils, Malayalees, Hindis, Sikhs, etc.
<i>Other Ethnic Groups</i>	This comprises all persons other than Chinese, Malays and Indians. They include Eurasians, Caucasians, Filipinos, Burmese, Arabs, Thais etc.

Residential Status

Singapore citizens and permanent residents are classified as Singapore residents or the resident population. Singapore permanent residents refer to non-citizens who have been granted permanent residence in Singapore. The non-resident population comprised foreigners who were working, studying or living in Singapore but not granted permanent residence, excluding tourists and short-term visitors.

Marital Status

Marital status refers to a person's conjugal status in relation to the marriage laws or customs in Singapore.

<i>Single</i>	This refers to persons who have never been married.
---------------	-----------------------------------------------------

<i>Married</i>	This refers to persons who are legally married or married according to customary rites.
<i>Widowed</i>	This refers to persons whose spouses are deceased and have not remarried.
<i>Divorced/Separated</i>	This refers to persons whose marriages have been legally dissolved, or persons who have been legally separated or estranged from their spouses and who have not remarried.

Religion

Religion refers to the religious faith or spiritual belief of a person regardless of whether he/she regularly attends religious ceremonies in a temple, mosque, church or other religious building. He/she may or may not practise his/her faith or belief. It is as declared by the person.

EDUCATION, LITERACY AND LANGUAGE

Literacy (Language Literate In)

This refers to a person's ability to read with understanding, e.g. a newspaper, in the language(s) specified.

Language Most / Second Most Frequently Spoken at Home

Language most / second most frequently spoken at home refers to the language or dialect that a person uses most / second most frequently at home when speaking to other household member(s). For persons who are staying alone, it refers to the language(s)/dialect(s) he/she uses most / second most frequently.

Level of Education Attending

Level of education attending refers to the grade or standard of formal education which a student aged 5 years and over is attending. The classification of level of education attending into the following main categories is based on the Singapore Standard Educational Classification 2020 :

<i>Pre-Primary</i>	This refers to students attending nurseries, kindergartens or pre-primary classes.
--------------------	------------------------------------------------------------------------------------

<i>Primary</i>	This refers to students attending Primary 1 to 6 and special classes for the educationally sub-normal.
<i>Secondary</i>	This refers to students attending Secondary 1 to 5 or courses of secondary level offered in the vocational, technical and commercial education institutions, including Institute of Technical Education (ITE) Skills Certificate courses.
<i>Post Secondary (Non-Tertiary)</i>	This refers to students attending Pre-university classes and junior colleges or other courses at post-secondary level, including fifth or sixth year of the Integrated Programme, National ITE Certificate (Nitec), Higher Nitec and Master Nitec.
<i>Polytechnic Diploma</i>	This refers to students attending polytechnic diploma or polytechnic post/advanced/specialist/management/graduate diploma courses offered by the local Polytechnics such as the Singapore Polytechnic, Ngee Ann Polytechnic, Temasek Polytechnic, Nanyang Polytechnic and Republic Polytechnic.
<i>Professional Qualification and Other Diploma</i>	This refers to students attending courses leading to the award of professional qualification and other diploma, including ITE diploma, National Institute of Education (NIE) diploma, Singapore Institute of Management (SIM) diploma, LASALLE diploma, Nanyang Academy of Fine Arts (NAFA) diploma, Association of Chartered Certified Accountants (ACCA), Chartered Financial Analyst (CFA).
<i>University</i>	This refers to students attending degree or post-graduate courses in universities.

Highest Qualification Attained

Highest qualification attained refers to the highest grade or standard a person has passed or the highest level where a vocational/skill certificate, diploma, or degree is

awarded. The classification of highest qualification attained into the following main categories is based on the Singapore Standard Educational Classification 2020:

<i>No Qualification</i>	This refers to persons who have never attended school, have primary education but without Primary School Leaving Examination (PSLE) certificate or their equivalent, or have Certificate in Basic Education for Skills Training (BEST) 1 – 3.
<i>Primary</i>	This refers to persons who have PSLE or other certificate of equivalent standard, or have Certificate in BEST 4 or at least 3 achievements ¹ for different Workplace Literacy or Numeracy (WPLN) skills at Level 1 or 2.
<i>Lower Secondary</i>	This refers to persons who have secondary education without any subject pass at General Certificate of Education (GCE) Normal ('N')/Ordinary ('O') Level or equivalent, or have Certificate in Worker Improvement through Secondary Education (WISE) 1-3, or basic vocational certificates (including ITE Basic Vocational Training), or at least 3 achievements for different WPLN skills at Level 3 or 4.
<i>Secondary</i>	This refers to persons who have at least 1 subject pass at GCE 'N' / 'O' Level, or have National ITE Certificate (Nitec) (Intermediate) or equivalent (including National Technical Certificate (NTC) Grade 3, Certificate of Vocational Training, BCA Builder Certificate), or have ITE Skills Certificate (ISC) or equivalent (including Certificate of Competency, Certificate in Service Skills) or at least 3 achievements for different WPLN skills at Level 5 and above.
<i>Post-Secondary (Non-Tertiary)</i>	This refers to persons who have at least 1 subject pass at GCE 'A'/'H2' Level or other certificates/qualifications of equivalent standard. It also includes those who have Nitec (including Post Nitec Certificate, Specialist Nitec, Certificate in Office

¹ These refer to both WSQ Statement of Attainment and/or certification issued by SkillsFuture Singapore's appointed WPLN assessment partner.

Skills, NTC Grade 2, National Certificate in Nursing, BCA Advanced Builder Certificate), or have Higher Nitec (including Certificate in Business Skills, Industrial Technician Certificate and other polytechnic certificates), or Master Nitec (including NTC Grade 1). This group also includes Workforce Skills Qualification (WSQ) Certificate/Highest Certificate/Advanced Certificate or equivalent, International Baccalaureate/NUS High School diploma or other post-secondary certificates/qualifications (including SIM certificates).

Polytechnic Diploma

This refers to persons who have Polytechnic diploma or Polytechnic post diploma (including polytechnic advanced/specialist/management/graduate diploma, diploma (conversion)).

Professional Qualification and Other Diploma

This refers to persons who have qualifications awarded by professional bodies (including ACCA, CFA), and other diploma qualifications (including ITE Diploma, NIE diploma, SIM diploma, LASALLE diploma, NAFA diploma, WSQ diploma, WSQ specialist diploma etc).

University

This refers to persons who have bachelor's degree or postgraduate diploma (including NIE postgraduate diploma), or master's degree, or doctorate.). It also includes persons with WSQ graduate certificate and WSQ graduate diploma.

Field of Study

Field of study refers to the principal discipline, branch or subject matter of study that leads to the award of the qualification attained at polytechnics or university levels. The classification of field of study is based on the Singapore Standard Educational Classification 2020.

ECONOMIC CHARACTERISTICS

Labour Force Status

<i>Labour Force</i>	Refers to persons who are either employed or unemployed during the reference period.
<i>Employed</i>	Refers to persons who during the reference period: (i) work for one hour or more either for pay or profit; or (ii) have a job or business to return to but are temporarily absent because of illness, injury, breakdown of machinery at workplace, labour management dispute or other reasons.
	Members of the Singapore Armed Forces including full-time National Servicemen are included, unless stated otherwise.
<i>Unemployed</i>	Refers to persons who are not working but are actively looking for a job and available for work during the reference period. They include persons who are not working but are taking steps to start their own business or taking up a new job after the reference period.
<i>Outside the Labour Force</i>	Refers to persons who are neither employed nor unemployed during the reference period.

Occupation

This refers to the type of work performed by workers during the reference period, which may not necessarily be related to their training, skill or professional qualification. In the case of workers who perform two or more kinds of work, their occupation would refer to the one in which they usually work the longest hours during the reference period. The classification of occupations is based on the Singapore Standard Occupational Classification 2020.

Industry

This refers to the major kind of economic activity or the nature of business of the firm, organisation, establishment or department in which the person is employed during

the reference period. If the person is self-employed, this item refers to the kind of economic activity or nature of business he/she is operating. The classification of industries is based on the Singapore Standard Industrial Classification 2020.

Employment Status

This refers to the status of employed persons in relation to their employment. There are four types of employment status:

<i>Employers</i>	This refers to persons who hire one or more paid employees <i>in their business or trade</i> .
<i>Own Account Workers</i>	<i>This refers to persons who operate their own business without employing any paid employee in the conduct of their business or trade.</i>
<i>Employees</i>	<i>This refers to persons who work for employers in return for regular wages or salaries.</i>
<i>Contributing Family Workers</i>	<i>This refers to persons who assist in the operation of family business without receiving regular wages or salaries.</i>

Usual Hours Worked

This refers to the number of hours a person usually works on a typical week, regardless whether he/she is paid for it. For those who are temporarily not working (e.g. on leave), the most recent week of employment is used. For a person who has just started work during the reference period, usual hours of work refers to the number of hours per week he/she is expected to work in that job. For a multiple jobholder, it should be aggregated from the hours spent in all the jobs.

Monthly Income from Work

This refers to income received by a employed person from employment and business. It does not include other forms of income which are not derived from work.

For self-employed persons, gross monthly income refers to the average monthly profits from their business, trade or profession (total receipts less business expenses incurred) before deduction of income tax.

For employees, gross monthly income refers to the total gross monthly wages or salaries before deduction of employee CPF contributions and personal income tax. It

comprises basic wages, commissions, overtime pay, National Wages Council (NWC) supplements, tips and other allowances. Payments in kind, reimbursement for transport and other expenses are excluded. If they have just started work, the monthly income refers to the wages they will be receiving for a full-month's work. It includes one-twelfth of the annual bonus.

Workplace Location

This refers to the address of the person's workplace where he/she usually works most of the time. For those who report to different places on different days, this refers to the address where this person reported most frequently to during the last week.

HOUSEHOLD AND HOUSING CHARACTERISTICS

Resident Household

A household refers to (i) a group of two or more persons living together in the same house and sharing common food or other essential arrangements for living; or (ii) a person living alone or a person living with others but having his own food or other essential arrangements for living. Although persons may be living in the same house, they may not be members of the same household. For example, a family renting out a room to a tenant – if the tenant does not share or have meals with the family, the tenant belongs to a separate household.

A resident household refers to a household where the household reference person is a resident (i.e. Singapore citizen or permanent resident).

Household Reference Person

The household reference person refers to the oldest member, the main income earner, the owner-occupier of the house, the person who manages the affairs of the household, or the person who supplied the information pertaining to other members.

Prior to Census of Population 2020, survey respondents were asked to identify the 'head of household'. The identified person is used as the reference person to determine relationships between household members. In Census of Population 2020, the term 'head of household' has been replaced with 'household reference person'.

Household Structure

Household structure refers to the classification of a household according to the number of family nuclei and the number of generations in the household.

A family nucleus in a household can be formed by:

- (a) a married couple; or
- (b) one parent with never-married child(ren).

Each nucleus comprises one or more generations.

A household can have one family nucleus, multiple family nuclei or none.

Household with no family nucleus refers to a household formed by a person living alone or living with others but does not constitute any family nucleus. This is further classified into one-person household or household with more than one person.

Household Living Arrangement

Household living arrangement refers to the classification of a household according to the household composition, age and marital status of household reference person and age group of the youngest child of the household reference person. Households are broadly classified into:

<i>Married Couple-Based</i>	Refers to households with a married household reference person and spouse. This category is further split into those living with child(ren) and without children.
<i>Other Households With Family Nucleus</i>	Includes lone parent households whose household reference person is never-married/widowed/divorced/separated and living with child(ren) aged below 16 years or never-married children as well as other types of households with a family nucleus. For example, a divorced household reference person living with elderly parents only, or a widowed household reference person living with the son and daughter-in-law.
<i>Households Without Family Nucleus</i>	Refers to households without a family nucleus, including one-person households. For example, a never-married household reference person living with never-married siblings, a household reference person living with unrelated persons only, and an ever-married person who is living alone as the children have grown up and moved out from the parental home.

Household Size

Household size refers to the total number of members in the household, including domestic workers.

Number of Employed Persons in Household

The number of employed persons in the household includes members of the same household who are employed. Domestic workers in the household are excluded.

Household Income from Work

Household income from work refers to the sum of income received by employed members of the household from employment and business. However, it does not include the income of domestic workers.

Household Income from Work Per Household Member

Household income from work per household member refers to the household income from work divided by the total number of members (household size) in the household. For example, if there is one person in a household of four is employed, his/her income is divided by four to derive the household income per household member.

Predominant Household Language

Predominant household language refers to the language or dialect spoken by the majority of household members to other members (excluding domestic workers and unrelated persons), taking into account the reported language most frequently spoken and language second most frequently spoken at home for each household member.

Type of Dwelling

A dwelling refers to a building or part of a building used or intended to be used by one or more persons as living quarters. Each dwelling has its own separate entrance(s) with direct access to a public road or pathway. A dwelling may be a residential building by itself, or a unit in a residential building, or part of a non-residential building such as a shop or factory with space used as living quarters.

The dwellings covered are broadly classified into these three housing unit categories: Housing and Development Board (HDB) properties, condominiums and other apartments, and landed properties.

The Singapore Standard Classification of Type of Dwelling (Jan 2012) is used to classify the population and households by type of dwelling.

Tenancy

Tenancy refers to the tenure status of the household with respect to the dwelling in which the household members live. Tenancy is classified into the following three main categories:

<i>Owner-Occupied</i>	Refers to a household where the household reference person and/or any other member(s) in the household owns the dwelling unit. This includes those which are fully paid-up as well as those with outstanding housing loans.
<i>Rented</i>	Refers to a household where the household reference person and/or any other member(s) in the household rents whole or part of the dwelling unit.
Others	Refer to a household where the household reference person and/or any other member(s) in the household occupies whole or part of the dwelling unit without charge (provided free by other persons (e.g., employers, relatives, friends, or any other persons)).

GEOGRAPHIC DISTRIBUTION AND TRANSPORT CHARACTERISTICS

Planning Areas of Residence / Workplace

Planning areas refer to areas demarcated in the Urban Redevelopment Authority's Master Plan 2019.

Planning Regions of Residence

Planning regions refer to areas demarcated in the Urban Redevelopment Authority's Master Plan 2019.

Floor Area of Residence

Floor area of residence refers to the total floor area of the residential dwelling unit of which the resident is living in and may also include areas such as planter box and air-con ledge.

Mode of Transport to School / Work

Mode of transport to school or work refers to how a student or a employed resident usually travels from home to school or work respectively in each journey.

Travelling Time to School / Work

Travel time to school or work refers to the total number of minutes that it usually takes a student or an employed resident to travel from home to school or to work respectively. The travel time includes time spent waiting for public transportation and walking to the bus-stop or MRT/LRT station.

DIFFICULTY IN PERFORMING BASIC ACTIVITIES

Difficulty in performing basic activities refers to the difficulties a person may have as the result of physical or mental health problem(s) in performing one or more of the activities below. It excludes those caused by a lack of resources. Difficulty in performing basic activities adopts the guidelines from the Washington Group on disability statistics. The person may or may not be medically diagnosed with a disability. Difficulty in the following core functional domains refer to:

<i>Seeing</i>	Persons who have vision difficulties or problems seeing even when wearing glasses (if they wear glasses).
<i>Hearing</i>	Persons who have some hearing limitation or problems of any kind with their hearing even when using a hearing aid (if they wear a hearing aid).
<i>Mobility</i>	Persons who have some limitation or problems of any kind walking or climbing steps without the assistance of any device (wheelchair, crutches, walker etc.) or human.
<i>Remembering</i>	Persons who have some problems with remembering or focusing attention that contribute to difficulty in doing their daily activities.

<i>Self-Care</i>	Persons who have some problems with taking care of themselves independently by washing all over and dressing.
<i>Communicating</i>	Persons who have some problems with talking, listening or understanding speech such that it contributes to difficulty in making themselves understood to others or understanding others, using one's usual (customary) language.

Living Arrangement of Residents Aged 65 Years and Over

Residents aged 65 years and over are classified according to their co-residence with their spouse or children. Additional dimension on the labour force status of the children is incorporated into the classification.

With At Least One Employed Child This refers to a resident aged 65 years and over living with his/her children in the same household, at least one of whom is employed.

With All Non-Employed Children This refers to an elderly person living with his/her children in the same household, all of whom are not employed.

Residents aged 65 years and over who are not living with their spouse or children are classified according to whether they are living alone or with other elderly persons.

Residents aged 65 years and over living alone refer to those in one-person households, with or without other occupants in the same dwelling unit.

Appendix

Sample Design and Sampling Variability

Sample Design and Selection

The sample for the Census of Population 2020 was selected from a sampling frame comprising all residential dwelling units in Singapore. As the sample survey of the Census 2020 covered only households in residential dwellings, institutions such as military camps, hostels and hotels were excluded from the frame.

The sample was selected based on a stratified design. Dwelling units in the sampling frame were divided into different groups. The groups are defined based on the planning areas demarcated by the Urban Redevelopment Authority and broad dwelling type groups. A random sample was then selected from the different groups by systematic sampling with a random start. The samples selected from each group were combined to form the required sample of about 150,000 dwelling units.

Sampling Variability

As the survey estimates are based on information obtained from a fraction of the population instead of the whole population, the precision of estimates derived from the sample survey are affected by sampling errors. Sampling errors refer to the difference between the estimate based on a sample and its ‘true’ population value that would result if the whole population has been surveyed.

The extent of sampling error of an estimate under a particular sample design is assessed by the variability of the estimate across all possible samples under the design. One common measure of this variability is given by the standard error (SE), which is the standard deviation of the sampling distribution of the estimate. Another measure is the relative standard error (RSE), which is obtained by expressing the standard error as a percentage to the estimate. The smaller the RSE, the more precise is the estimate.

Generalised Sampling Errors Tables

From Table A1, the DEFT¹ for most of the selected attributes (T_Y) is about 1. It is impractical to compute and display the sampling error for each and every of the possible estimates such as the total number of elements in the population with a given attribute Y from the Census 2020. Thus, generalized sampling errors tables are provided instead as a guide to data users for estimating the errors of any estimates.

Since most of the attributes in Table A1 have DEFT about 1, data users should generally use Table A2 (DEFT value of 1) to determine sampling errors for the attribute of interest. For attributes of individuals with larger DEFT, such as language most frequently spoken at home, data users can refer to Table A3 (DEFT value of 2).

The smaller the estimate, the larger is the RSE. This implies that sample estimates of a rare characteristic would have high RSEs and users would have to be careful in drawing inferences based on the sample estimates.

Table A1 Sampling Errors and DEFT of T_Y for Selected Attributes, Census 2020

	Sample Estimate ('000)	Standard Error (T_Y)	Relative Standard Error (T_Y)	95% Confidence Interval ('000)		DEFT (T_Y)
				Lower	Upper	
Residents Aged 15 Years & Over						
Single	1,090.7	3,885	0.4	1,083.1	1,098.3	1.22
Married	2,035.4	4,296	0.2	2,027.0	2,043.8	1.14
Widowed	183.2	1,429	0.8	180.4	186.0	0.98
Divorced/Separated	149.8	1,375	0.9	147.1	152.5	1.04
Ever-Married Resident Females Aged 15 Years & Over						
With No Children Born	164.3	1,387	0.8	161.6	167.0	1.00
With 1 Child Born	256.0	1,674	0.7	252.7	259.3	0.98
With 2 Children Born	462.6	2,034	0.4	458.7	466.6	0.90
With 3 Children Born	238.6	1,604	0.7	235.5	241.8	0.97
With 4 or More Children Born	136.5	1,266	0.9	134.0	139.0	1.00
Residents Aged 15 Years & Over*						
With Below Secondary Qualifications	765.9	3,162	0.4	759.7	772.1	1.13
With Secondary Qualifications	505.6	2,599	0.5	500.5	510.7	1.11
With Post-Secondary (Non-Tertiary) Qualifications	341.9	2,193	0.6	337.6	346.2	1.12
With Diploma and Professional Qualifications	519.9	2,623	0.5	514.8	525.1	1.11
With University Qualifications	1,007.2	3,493	0.3	1,000.3	1,014.0	1.12

* Data pertain to residents who were not attending educational institutions as full-time students and include those who were upgrading their qualifications through part-time courses.

¹ The DEFT is the ratio of the standard error of the estimate, under the sample design used, to that of a simple random sample. This ratio measures the effect of the complexity of the sample design on the standard error.

Table A1 Sampling Errors and DEFT of T_Y for Selected Attributes, Census 2020 (cont'd)

	Sample Estimate ('000)	Standard Error (T_Y)	Relative Standard Error (T_Y)	95% Confidence Interval ('000)		DEFT (T_Y)
				Lower	Upper	
Residents Aged 15 Years & Over						
Literate in English	2,852.0	5,428	0.2	2,841.3	2,862.6	1.44
Literate in Two or More Languages	2,497.8	5,504	0.2	2,487.0	2,508.6	1.44
Residents Aged 5 Years & Over						
Spoke English Most Frequently at Home	1,735.2	6,195	0.4	1,723.1	1,747.4	1.69
Spoke Mandarin Most Frequently at Home	1,075.2	5,270	0.5	1,064.8	1,085.5	1.66
Spoke Malay Most Frequently at Home	332.3	3,837	1.2	324.7	339.8	1.98
Spoke Tamil Most Frequently at Home	89.9	1,916	2.1	86.2	93.7	1.86

Simple Guide on Using Relative Standard Error and Confidence Interval

To compute the 95% confidence interval of an estimate of persons with size 1,100,000 as below.

Step 1: From Table A2, the RSE of this estimate is close to 0.3%

Step 2: To compute 95% confidence interval of the estimate

$$\text{Lower Confidence Interval} = 1,100,000 - 1.96 \times 0.3\% \times 1,100,000 = 1,093,532$$

$$\text{Upper Confidence Interval} = 1,100,000 + 1.96 \times 0.3\% \times 1,100,000 = 1,106,468$$

$$95\% \text{ Confidence Interval} = (1,093,532, 1,106,468)$$

There is a 95% chance that the ‘true’ population value is between 1,093,532 and 1,106,468.

SINGAPORE DEPARTMENT OF STATISTICS INFORMATION DISSEMINATION SERVICES

Statistics Singapore Website

The *Statistics Singapore Website* was launched by the Singapore Department of Statistics (DOS) in January 1995. Internet users can access the website by connecting to:

www.singstat.gov.sg

Key Singapore statistics and resources are available via the following sections:

- What's New
 - Obtain latest data for key economic and social indicators, browse news releases by DOS and Research and Statistics Units (RSUs) of other public sector agencies.
- Find Data
 - Choose from almost 50 topics to access the relevant statistics, press releases, infographics, charts, storyboards, videos and references.
- Publications
 - Browse DOS's publications, papers and articles by topics. All publications are available for free access.
- Advance Release Calendar
 - View dates of upcoming releases in the half-yearly ahead calendar.

The website also provides a convenient gateway to international statistical websites and resources:

- IMF Dissemination Standards Bulletin Board
 - View metadata and latest data about Singapore's key indicators in the real, fiscal, financial and external sectors, including dissemination practices and information about pre-release access of current indicators.
- International Statistics
 - Access international databases, websites of international bodies and national statistical offices.
- International Classifications
 - Access quick links to international economic and social classifications.

SingStat Express

Subscribe to SingStat Express and receive email and SMS alerts (for local users) on the latest statistical releases of your choice. Details are available at www.singstat.gov.sg/whats-new/sign-up-for-alerts.

SingStat Mobile App

The SingStat Mobile App provides users with on-the-go access to latest key Singapore official statistics and ASEAN statistics via their mobile devices. The app allows visualisation of data with over 200 charts of commonly used statistics from 28 data categories. Users can also opt to receive notifications on updates to their preferred indicators, organise data categories in the order of their preference, download tables or share charts via social media, perform computation for quick analyses and bookmark indicators for quick access. The app is available for downloading in iOS and Android devices. More information is available at www.singstat.gov.sg/our-services-and-tools/singstat-mobile-app.

SINGAPORE DEPARTMENT OF STATISTICS
INFORMATION DISSEMINATION SERVICES (cont'd)

SingStat Table Builder

The SingStat Table Builder contains data series from 60 public sector agencies providing a comprehensive statistical view of Singapore economic and socio-demographic characteristics. Users may create customised data tables, and export them in different file formats and download multiple tables at one go. APIs for commonly accessed tables are provided in JSON and CSV formats for ease of data retrieval. In addition, developer APIs are available for users to customise and use the parameters available to define queries. Explore data trends with this digital service at www.singstat.gov.sg/tablebuilder.

Really Simple Syndication

Really Simple Syndication (RSS) is an easy way to stay updated on the latest statistical news released by DOS. The SingStat RSS feed delivers statistical news highlights and hyperlinks to the source documents whenever the updates are posted. More information is available at www.singstat.gov.sg/whats-new/really-simple-syndication-rss

E-survey

The E-survey enables business organisations to complete and submit their survey forms through the internet. Using secured encryption protocols, the E-survey ensures that the information transmitted through the net is secured and protected. The system features online helps and validation checks to assist respondents in completing their survey forms. With the E-survey, respondents do away with the tedious paper work and manual tasks of mailing or faxing their survey returns to DOS.

Statistical Enquiries and Feedback

If you have any statistical enquiries or feedback on our services, you are welcomed to:

-  E-mail us at **info@singstat.gov.sg**
-  Fax to us at **(65) 6332-7689**
-  Call us at **1800-3238118* (local callers)**
(65) 6332-7738 (overseas callers)

* Calls from mobile telephone lines to 1800 local toll free number may be subject to mobile airtime charges as imposed by the relevant mobile service provider.
